

Configure a Recast Proxy for Warranty Information Collection

Last Modified on 11.29.24

Setting up a Recast Proxy for warranty information collection in Endpoint Insights involves authorizing the proxy in the Recast Management Server (if necessary) and creating a Recast Proxy route. Routes determine which Recast Proxy runs a Recast action.

A Recast Proxy route sends an action to a service account if:

- The route is assigned a role that has permissions to run the action
- The targets of that action fall within the [route's assigned scope](#)

For more information, see [Route Types](#).

Proxy Route Prerequisites:

- Recast Management Server installed with Recast Proxy
- Recast Proxy service account has the [required permissions to collect warranty information](#)

To create a Recast Proxy route:

1. In your Recast Management Server, navigate to **Administration > Routes**.
2. In the main window, click **Create**.
3. Set the route **Type** to **Recast Proxy**.
4. As **Recast Proxy**, select your service account.
5. Set **Role** to **Administrators**.
6. Click **Create**.
