

Hardware Inventory Functionality

Last Modified on 12.02.25

To check hardware inventory function for non-warranty data:

1. Install the Recast Agent client on a single device.
2. Run a hardware inventory using Right Click Tools. Hardware will be returned to Configuration Manager within 5–10 minutes. You can also choose to review the `inventoryagent.log` to see the collection of Insights classes.
3. In your Configuration Manager console, open **Resource Explorer**.
4. Confirm that the last hardware inventory date is recent. You should see all (or most) of the Insights hardware inventory classes on a device.

To check hardware inventory function for warranty data:

- In your Recast Management Server, on the **Warranty** page, confirm that the last run date is populated.
 - Using the Power BI desktop Power BI report Server or SSRS, review the **WIR Details Dashboard**. This will show you all devices discovered within the last 7 days.
-
