5.10 & Earlier

Last Modified on 2026-10-29

Right Click Tools Version 5.10.2508.1302

Release Date: August 20, 2025

Version 5.10.2508.1302 includes new features in Right Click Tools for Intune. This version also has some bug fixes for Recast Management Server, Right Click Tools, Privileged Access, and Patching.

Upgrade to this Recast Software release by downloading it from the Recast Portal. Instructions for installing this version can be found in our articles on updating Right Click Tools, Insights (previously Endpoint Insights), Privileged Access (previously Privilege Manager), and Patching (previously Application Manager).

Features

Right Click Tools

New Entra ID– and Intune–Specific Tools

- Delete Devices from Azure: Along with the ability to remove devices from Intune (introduced last month), you can now remove devices from Entra using the same tool.
- Sync Intune App and Compliance Policy: You can now force an Intune policy synchronization.

  NOTE: Delete Devices from Azure (Intune/Entra), Synchronize Intune App and Compliance Policy, and Add Devices to an Entra Group do not currently work in Recast Builder.

Support for GCC High Environments in Intune

You can now run Right Click Tools in GCC High environments using the Right Click Tools for Intune browser extension. This functionality requires at least version 2.0.0.6 of the browser extension.

LIMITATION: Support for Delete Devices from Azure (Intune/Entra), Synchronize Intune App and Compliance Policy, and Add Devices to an Entra Group in GCC High environments will be added at a later date.

Recast Portal

User Experience Improvements

When you log into the Recast Portal, you'll notice some updates to the wording and row order. These changes are intended to add clarifying details and make the portal easier to use.

Users logging into the Recast Portal will see the following edits:

- On the login page, the **Username** label is now **Username (Email Address)**
- The note above the table now includes the former names for Privileged Access (Privilege Manager) and Patching (Application Manager)
- Right Click Tools Community has moved to the top of the table
- Right Click Tools Insights is now in proximity to Right Click Tools Enterprise
- The Right Click Tools Insights description now includes its former name, Endpoint Insights
- On the Email confirmed page, **Log in to access licenses,...** is now **Log in to download Recast software, access licenses,...**

NOTE: These changes went into effect on August 13th, 2025 as portal updates are not included in a software release.

Recast

Bug Fixes

Recast Management Server

Permissions: Users with the required admin permissions no longer see an 'Insufficient Recast Permissions' error. (Customer-Reported Bug 76147)

Service Connections: Attempting to view or edit a service connection in the Unconfirmed Service Connections window no longer results in an unresponsive Recast Management Server.

Right Click Tools

Console Extension: Customers who do not have the ConfigMgr console installed locally on the device will no longer see a 'Parameter "SiteServer" (string) must not be null or whitespace' error when running actions that use the two-grid view. (Customer-Reported Bug 73294)

Browser Extension: You can now select context menu items on the first click. (Customer-Reported Bug 76832)

Privileged Access (previously Privilege Manager)

Agents: Duplicate and non-existent users or groups no longer appear in the Groups view. (Customer-Reported Bug 11999)

Patching (previously Application Manager)

Deployment Processes: The environment name remains visible after clicking the Save button in the Deployment Process Details side panel.

Right Click Tools Version 5.10.2507.3105

Release Date: August 4, 2025

Version 5.10.2507.3105 is an off-cycle release that does not introduce new Recast application features.

This release updates product names to reflect the addition of Endpoint Insights, Privilege Manager, and Application Manager as modules within Right Click Tools Enterprise. This release also includes minor enhancements and bug fixes for Recast Management Server, Right Click Tools, and Application Manager (hereafter called Patching).

Instructions for installing this version can be found in our articles on updating Right Click Tools, Insights (previously Endpoint Insights), Privileged Access (previously Privilege Manager), and Patching (previously Application Manager).

In-Product Naming Updates

As Endpoint Insights, Privilege Manager, and Application Manager become add-ons within Right Click Tools, you'll see the following name changes in the Recast Management Server interface, the Right Click Tools console extension in Configuration Manager, and the Right Click Tools for Intune browser extension.

- Endpoint Insights is now **Insights**
- Privilege Manager is now **Privileged Access**
- Application Manager is now **Patching**

Recast

These in-product naming updates appear in v2.0.0.4 and later of the Right Click Tools for Intune browser extension.

For more about how our product lineup is changing, see the Recast Primer.

Enhancements & Bug Fixes

Recast Management Server

Snapshots: The default **Maximum Snapshot Age** in Recast Management Server Settings is now 90 days (up from 30 days), making it easier to compare months on Right Click Tools web dashboards.

Right Click Tools

Console Extension: Resolves an 'ArgumentNullException' error displayed in the two-grid results window when running actions via the browser extension with no Configuration Manager console installed on the device. (Customer-Reported Bug 73294)

Patching

Additional Installation Parameters: The Additional Installation Parameters setting now works in conjunction with pre-/post-install actions.

Deployment Processes: Application import into Intune no longer fails.

Email Templates: Correctly displays an error message if you attempt to name an email template using an existing template name.

Global Deployment Settings: Application Availability and Application Deadline settings now include the date and time (in UTC).

Right Click Tools Version 5.10.2507.1103

Release Date: July 16, 2025

Version 5.10.2507.1103 includes new features for Right Click Tools and Application Manager, plus bug fixes for Right Click Tools and Privilege Manager.
Upgrade to this Recast Software release by downloading it from the Recast Portal. Instructions for installing this version can be found in our articles on updating Right Click Tools, Endpoint Insights, Privilege Manager, and Application Manager.

Features

Right Click Tools

New Entra ID- and Intune-Focused Tools

Introducing two Recast actions to help you manage devices in Entra ID and Intune.

- Add Devices to an Entra Group
- Delete Devices from Azure (Intune)

Recast

> **KNOWN ISSUE**: The Delete Devices from Azure (Intune) action has a browser extension issue that is resolved in the August 2025 release.

NOTE: These two features are available via the Right Click Tools console extension and the Right Click Tools for Intune browser extension. Both features require v2.0.0.6 of the browser extension. The new version becomes available in the Google Chrome Web Store and Microsoft Edge Add-ons Store once each vendor completes its approval process.

More Device Management Tools in Intune

Right Click Tools for Intune now includes Recast actions developed during our recent Hackathon, as well as some classic Tools that were previously unavailable from the browser extension.

Security Tools	• Retrieve All BitLocker Keys – *new tool* • AD LAPS Password • Set LAPS Password Expiration
Console Tools	• Open Event Viewer – *new tool* • Disable Device(s) from Active Directory – *new tool* • AD Security Groups
Client Tools	• Show Collections – Advanced
Kiosk Manager	• View Scheduled Tasks • View Scheduled Task Results

PLEASE NOTE: These Right Click Tools features require an updated version of the Right Click Tools for Intune browser extension. The new browser extension version becomes available in the Google Chrome Web Store and Microsoft Edge Add-ons Store once each vendor completes its approval process.

Recast Management Server

Audit Log Improvements

Your Recast Management Server's Audit Log page now displays results as they return, meaning that you can monitor progress and interact with the page while results load—which is especially helpful when returning larger data sets.

Application Manager

Run Pre- and Post-Install Actions

Perform custom actions before and/or after a new application version is installed by adding a PowerShell script or an executable command to individual or all deployment processes. For details, see Pre- and Post-Install Actions.

Known Issue: Currently, the Additional Installation Parameters setting will not work in conjunction with pre-/post-scripting. Additional uninstallation parameters are not affected. This issue is fixed in the next release.

Bug Fixes

Right Click Tools

Recast Builder: No duplicate actions appear if an error occurs while attempting to load actions. (Customer-Reported Bug 68168)

Web Dashboards: Snapshots now return results from all Recast actions.

Privilege Manager

Activation Codes: Single-use activation codes now work when the time period prior to expiration is different than the default (1 hour).

Right Click Tools Version 5.10.2506.1707

Release Date: June 18, 2025

Version 5.10.2506.1707 includes new Right Click Tools and Application Manager features, plus fixes for a number of customer-reported bugs.
Upgrade to this Recast Software release by downloading it from the Recast Portal. Instructions for installing this version can be found in our articles on updating Right Click Tools, Endpoint Insights, Privilege Manager, and Application Manager.

Features

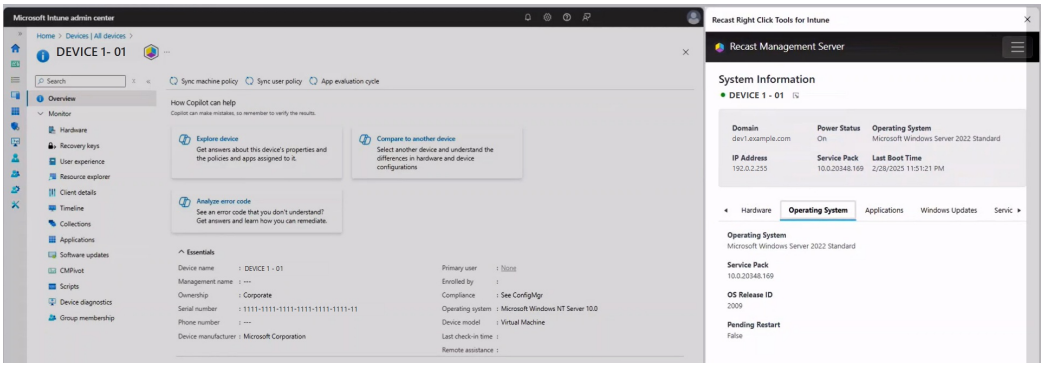

Right Click Tools

Run Multi-Device Actions in Intune

With the introduction of the Recast side panel in Right Click Tools for Intune, you can now multi-select devices and run an action against all of them at once. This feature requires a connection to Recast Management Server infrastructure.
For prerequisites and details, see Run Multi-Device Actions in Intune.

Enjoy a Better System Information Experience in Intune

Selecting System Information in Right Click Tools for Intune now opens the Recast side panel in your browser. This means you can surface all the same System Information data and actions faster within a cleaner and more usable design.
See Run System Information in Intune.

PLEASE NOTE: These two features require Version 2.0.0.3 or later of the Right Click Tools for Intune browser extension. The new browser extension version is now available in the Google Chrome Web Store and Microsoft Edge Add-ons Store.

Application Manager

Recast

Set Up Automatic Email Notifications

Use Application Manager's new email templates to set up and deliver automatic success and failure notifications for deployment processes and/or individual deployment steps. For success messages, you can also create new email templates that include the specific wording and deployment process details you choose.
For instructions, see:

- **Admin Notifications for Deployment Processes** – MECM or Intune
- **Admin Notifications for Deployments** – MECM or Intune

Extend a Deployment Delay

When setting up a deployment process, you can now delay an individual deployment step by up to 30 days. That's up from a previous limit of 7 days.
For instructions on including or editing a deployment delay, see Add a Deployment Process.

Bug Fixes

Recast Management Server

BitLocker Web Dashboard: Restores null exception handling in environments where all devices in Configuration Manager do not have a domain name. (Partially resolves Customer-Reported Bug 71797 – follow-up work continues)

Web Dashboards: Snapshot and trend data fully aligns with live dashboard data. (Customer-Reported Bug 70984)

Right Click Tools

Remote Software Center: Resolves an 'Invalid URI: The format of the URI could not be determined' error on the Applications tab. (Customer-Reported Bug 1923)

Update Notifications: Bugfix release alerts no longer appear in ConfigMgr when the installed version matches the most current bugfix version available. (Customer-Reported Bug 67176)

Kiosk Manager: The 'Reboot on idle for Autologin user' option now performs as expected. (Customer-Reported Bug 14782)

Privilege Manager

Target Groups: Agent Gateways respect the target group's **Manage hybrid devices From Azure Active Directory** setting. (Customer-Reported Bug 68251)

Privilege Elevation: Privilege Manager elevates permissions correctly on FIPS-compliant devices. (Customer-Reported Bug 70062)

Activation Code: Single-use activation codes generate successfully regardless of the expiry time set.

Recast Management Server Settings: Privilege Manager respects a disabled **Provide Analytics Data To Recast** setting.

Application Manager

Deployment Scheduling: When the Application Availability and/or Application Deadline timing is set to 'As soon as possible', deployments now begin correctly.

Right Click Tools Version 5.9.2505.2307

Recast

Release Date: May 23, 2025

> **Version 5.9.2505.2307** replaces Version 5.9.2505.2003 in the Recast Portal. This version resolves separate issues that were preventing Privilege Manager and the new agent re-enrollment feature from functioning properly.

Version 5.9.2505.2307 includes new features, design improvements, and bug fixes. Upgrade to this Recast Software release by downloading it from the Recast Portal. Instructions for installing this version can be found in our articles on updating Right Click Tools, Endpoint Insights, Privilege Manager, and Application Manager.

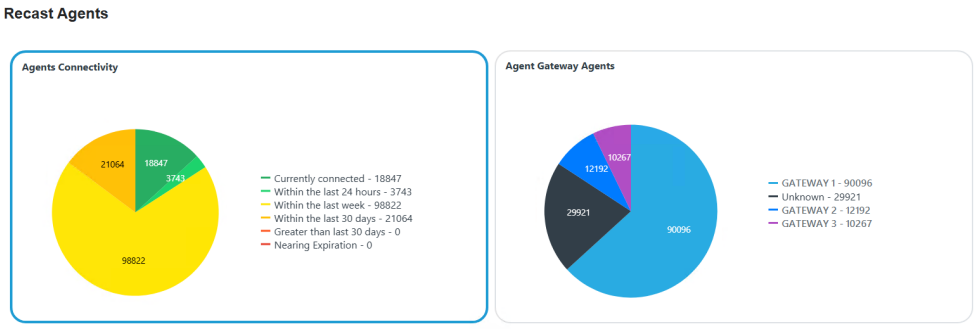

Features

This release includes new features developed during our Spring Hackathon, several of which deliver on requests submitted to our Ideas Portal.

Easier Agent Management, Re-enrollment & Cleanup

The new Agent Management web dashboard uncomplicates the task of overseeing communications between your agents and Recast Management Server. Find out when an agent last connected to an agent gateway, and the specific gateway to which an agent connects, to pinpoint connectivity issues.

To learn more, see Agent Management Dashboard.

You'll also find agent connection details on the Recast Agents page, where you'll now see faster page loading speeds when there are many agents.

Behind the scenes, we've added automatic agent re-enrollment, as well as an agent cleanup process that automatically removes inactive and duplicate agents, which means less time spent manually managing agents that fail to communicate with RMS.

New Right Click Tools

Retrieve All BitLocker Keys: Search all your configured BitLocker recovery key locations with a single Enterprise tool

Get User Profile Size: View user profile sizes so you can identify those worth removing to regain space

Disable or Enable Devices in Active Directory: A less-permanent alternative to deleting devices you may need to re-enable later

View Disk Space Details: See where a shortage of free disk space might cause software deployment or patching issues

Open Event Viewer: Access a remote Windows Event Viewer session straight from your Console Tools

For a video walkthrough of new tools available in the Community Edition, see New Community Right Click Tools – May

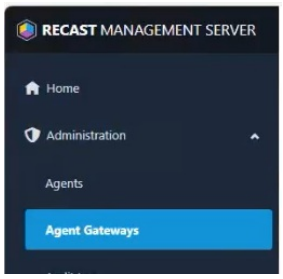

2025 on our YouTube channel.

Recast Management Server Design Updates

You'll notice some visual design changes in RMS. We've adjusted the look of a number of user interface elements for quick recognition and improved usability.

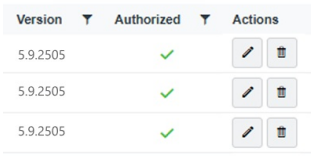

Navigation panel updates

- A new Recast Management Server wordmark aligns with our branding
- When you select a menu item:
  - The text is bolded for differentiation
  - The item is highlighted with a blue bar (rather than a grey one) to make the current selection more obvious at a glance
- Chevrons (^) are smaller, making them less conspicuous

RMS page updates

- Edit and Delete icons are now displayed in greyscale to reduce their prominence
- Header and footer rows now have a grey (rather than blue) background to allow strategic color use on buttons and symbols to stand out
- Column headings are bolded for improved legibility and differentiation from text within the table

Bug Fixes

Recast Management Server

Installation: Clicking 'Skip SQL Connection Test' during installation now stops all SQL connection attempts. (Customer-Reported Bug 68191)

Discovery Sync:

- Running a sync no longer produces a 'String or binary data would be truncated in table' error. (Customer-Reported Bug 72409)
- Running a sync for an active directory domain with a deeply nested hierarchy no longer produces a timeout error.

Task Scheduler: The Recast Management Server now communicates with the Task Scheduler Agent to determine whether cleanup tasks exist.

Right Click Tools

Installation: The Right Click Tools installer now accepts a Community license. (Customer-Reported Bug 72498)

Recast Builder: List input parameters now pass successfully to subsequent actions. (Customer-Reported Bug 14471)

Kiosk Manager: You can now apply a Kiosk Profile via a Recast Agent route without seeing a 'KeyNotFoundException' error.

Recast

Privilege Manager

Agent Authentication: A resolved Recast Agent authentication issue no longer prevents Privilege Manager from functioning correctly.

Application Manager

Integrations: Deleting an integration now properly deletes all configuration associated with the integration. There's also a new confirmation dialog when deleting an integration.

Right Click Tools Version 5.9.2504.1505

Release Date: April 16, 2025

Version 5.9.2504.1505 includes bug fixes. Upgrade to this Recast Software release by downloading it from theRecast Portal. Instructions for installing this version can be found in our articles on updatingRight Click Tools, Endpoint Insights, Privilege Manager, and Application Manager.

Bug Fixes

Recast Management Server

Recast Agent: Fixes an issue with the Security Identifier (SID) being populated incorrectly when the Recast Agent is not connected to a domain controller. (Customer-Reported Bug 71383)

RMS: Fixes Recast Management Server crashes resulting from an unhandledNullReferenceException. (Customer-Reported Bug 6997)

Service Connection Data Sync: Fixes a timeout error when attempting to run a discovery sync for a service connection that includes a long AD OU name. (Customer-Reported Bug 71092)

Privilege Manager

Groups: Fixes Entra ID group membership queries that return other items than group entities. (Customer-Reported Bug 72002)

Application Manager

Supersedence: Fixes an issue with the Enterprise catalog where application version supersedence rules do not work correctly. (Customer-Reported Bug 71599)

Announcing Application Workspace 4.3!

New Look & Feel: Updated branding for a fresher, more modern user interface
Microsoft Teams Integration: Access to applications and resources from within Teams
Enhanced Diagnostics Report: Faster troubleshooting with detailed insights
For more of what's new in this version, see Introducing Application Workspace 4.3.
