

# Set Conditional Responses

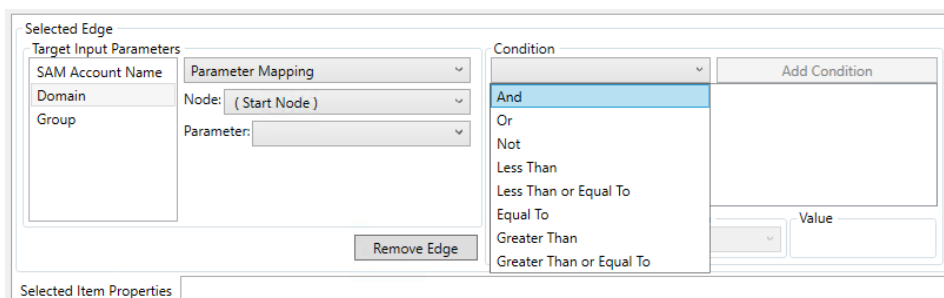

Last Modified on 06.18.24

Right Click Tools Builder lets you set conditional responses, allowing you to skip actions based on the results from previous actions. If the conditions are true, Recast Runner will execute the next step according to the specified workflow. If not, the next step (and any subsequent step in the chain) will be skipped.

**Logical term options:** And, Or, Less Than, Less Than or Equal To, Equal To, Greater Than, Greater Than or Equal To

To add a conditional response:

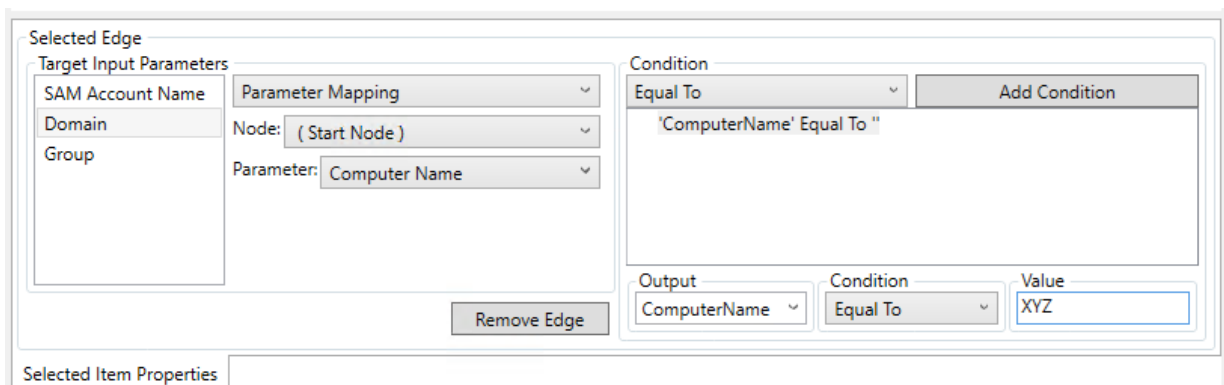

1. On the canvas, click on the edge (arrow) that connects the two actions between which you want to add a condition.
2. In the **Condition** section, click the **New Condition** icon (+ sign) and select a logical term from the drop-down list.

The screenshot shows the 'Selected Edge' panel. On the left, under 'Target Input Parameters', there are fields for 'SAM Account Name', 'Domain', and 'Group'. To the right of these are 'Parameter Mapping', 'Node: ( Start Node )', and 'Parameter:' dropdowns. A 'Remove Edge' button is at the bottom left. On the right side of the panel, the 'Condition' dropdown is open, showing a list of logical terms: 'And', 'Or', 'Not', 'Less Than', 'Less Than or Equal To', 'Equal To', 'Greater Than', and 'Greater Than or Equal To'. An 'Add Condition' button is next to the dropdown. Below the dropdown is a 'Value' input field.

3. Associate the condition with a specific **Output** and/or input **Value**.

In this example, an "Equal To" condition has been set from the Computer Name to the name of device "XYZ".

This screenshot shows the 'Selected Edge' panel after a condition has been set. The 'Condition' dropdown is now set to 'Equal To'. The text area below it contains the condition: ''ComputerName' Equal To '. At the bottom right, there are three fields: 'Output' (set to 'ComputerName'), 'Condition' (set to 'Equal To'), and 'Value' (set to 'XYZ'). The 'Remove Edge' button is still present at the bottom left.
