

Configure Action Properties

Last Modified on 07.05.24

Choose **Action Properties** to determine the design and configuration of a Recast Builder action.

To choose action properties:

1. On the canvas, click the **Start Node** (the object the user will click on to run the tool).
2. Under **Action Properties**, specify the **View**, **Name**, **Display** and **Action Type**, which are described below.

View

The **View** field determines how the results of a Right Click Tools Builder tool will display. View options do not affect the technical operation of Right Click Tools Builder tools — they only affect how results are displayed.

View Options:

- **Single Grid Results**
- **Two Grid Results**
- **Tabbed Results**: Shows a result for each step of the tool

The screenshot shows the 'Action Properties' panel. The 'View' dropdown is set to 'Two Grid Results'. The 'Name' field is empty. The 'Display' dropdown is set to 'Single Grid Results'. The 'Action Type' dropdown is set to 'Device with Resource ID'. To the right, there is a 'Custom Input Parameters' section with an empty input field and 'Add' and 'Remove' buttons. Below the panel, there is a 'Selected Item Properties' section which is currently empty.

Name

Name sets the name of the Recast Builder tool. After entering a new tool name, click the **Save** icon in the **My Right Click Tools** panel.

The screenshot shows the 'Action Properties' panel. The 'View' dropdown is set to 'Two Grid Results'. The 'Name' field is filled with 'Test Tool'. The 'Display' dropdown is set to 'Computer Name'. The 'Action Type' dropdown is set to 'Device with Resource ID'. To the right, there is a 'Custom Input Parameters' section with an empty input field and 'Add' and 'Remove' buttons. Below the panel, there is a 'Selected Item Properties' section which is currently empty.

Display

Display sets the Configuration Manager object that the Right Click Tools Builder tool is run against. Options differ according to the selected **Action Type**.

Example: For a tool run against a device, **Computer Name** would be an appropriate display option.

Action Type

The **Action Type** sets the properties on which the tool will take action.

Action Type Options:

- **Generic:** For all Right Click Tools Builder Tools acting on functions not related to users or devices.
- **Device** (with or without resource ID): For tools acting on devices. These tools will be available anywhere Right Click Tools device tools are available. The Resource ID is Configuration Manager's unique identifier for a computer object.
- **User** (with or without Resource ID): for tools acting on users. These tools will be available anywhere Right Click Tools user tools are available. The Resource ID is Configuration Manager's unique identifier for a user object.
