

Applications

Last Modified on 07.31.23

The **Remote Software Center - Applications** tab displays applications deployed to devices selected in the Configuration Manager console. The table includes details about the **Publisher**, **Version**, **Install State**, and the number of **Devices** on which the application is installed.

You can filter the applications by devices or users, and sort information by clicking any column header. Expand a table row to display details about the devices on which the application is deployed. For each device, the table shows the install **Status** of the application, when it was **Last Evaluated** and **Last Run**, and any **Error Code**.

The screenshot shows the 'Applications' tab in the Remote Software Center console. On the left is a navigation pane with 'Applications' selected, along with 'Software Updates', 'Task Sequences', and 'Compliance'. The main area contains a table of applications. A search bar and a 'Device' dropdown menu are at the top right, with 'Refresh', 'Install', and 'Uninstall' buttons. The table has columns for Name, Publisher, Version, Install State, and Devices. The 'Device' dropdown is open, showing 'martym-adm' and 'michaelb-adm' as options. The table lists several applications, including MBAM Client September 2017 Update, Explorer++, CMTrace, Local Administrator Password Solution, and Configuration Manager Client Upgrade Package. The bottom right corner shows '0 Errors' with an upward arrow icon.

	Name	Publisher	Version	Install State	Devices
<input type="checkbox"/>	MBAM Client September 2017 Update	Microsoft	2.5.113	1 / 1 installed	1
<input type="checkbox"/>	Explorer++		1.3.5	1 / 1 installed	1
<input type="checkbox"/>	CMTrace			1 / 1 installed	1
<input type="checkbox"/>	Local Administrator Password Solution	Microsoft		1 / 1 installed	1
<input type="checkbox"/>	Configuration Manager Client Upgrade Package	Microsoft Corporation			1
