

Boundaries

Last Modified on 07.31.23

The **Client Information - Boundaries** tab shows information about boundaries and boundary groups, including the boundary group to which the client is assigned, along with the associated site system servers and distribution points. This tab also displays the current client IP address and subnet mask.

The screenshot shows the Recast Software interface with the 'Boundaries' tab selected in the sidebar. The main content area displays a tree view of boundary groups and their members. At the top right of the main area is a 'Refresh' button. The tree view shows a 'Recast' group with 2 members. One member is expanded to show a table with the following data:

Computer Name	Boundary Name	Boundary Group Name
RECAST-DEMO-2.RECASTSOFTWARE.LOCAL	192.168.106.1-192.168.106.255	Recast

Below the table, there is a 'RecastSoftware' group with 1 member and an 'Unassigned Boundaries' group with 1 member. The bottom left corner shows the Recast Software logo, and the bottom right corner shows '0 Errors'.
