

Create a Proxy Route for Right Click Tools

Last Modified on 06.20.23

A route determines the proxy to which your Recast actions are sent. In order for the Recast Management Server to run actions through the Service Account Proxy, create a proxy route that uses the service account.

To create a Recast Proxy route:

1. In your Recast Management Server, navigate to **Administration > Routes**.
2. In the main window, click **Create**.
3. Set route **Type** to **Recast Proxy**.
4. Select your service account.
5. Set the **Role** to **Administrators**.
6. Click **Create**.
7. On the **Routes** page, click **Save**.

Once you've created the proxy route, you can use it to [run actions as a service account](#) or [configure it for management tasks](#).
