Recast

Application Information

Last Modified on 02.09.26

Application information settings are located on the Patching **Settings** page in your Recast Management Server.
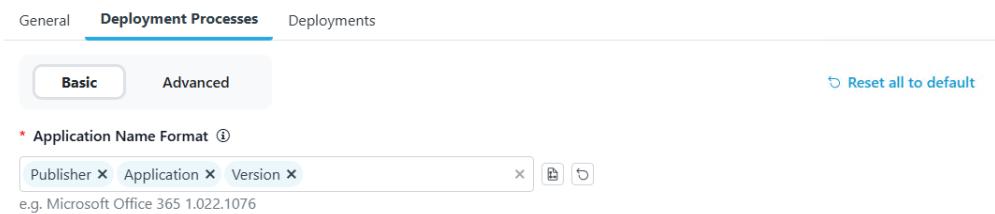

Basic Application Information Settings

Application Name Format

To add or edit basic application information settings:

1. From the Patching **Settings** page, click the **Environments** tab and select the Settings cog to the right of an environment.

2. On the **Environment Settings** page, open the **Deployment Processes** and **Basic** tabs.

The default naming format will display Publisher, Application, and Version information in that order (For example, Microsoft Office 365 v1.022.1076).

To edit the application name format, you can:
- Remove any categories you don't want to display in the application name by clicking the X next to the category.
- Add one or more categories to the application name by choosing them from the drop-down menu.
- Drag-and-drop the categories into the desired order.

To return the application name format to its default settings, click the **Reset to Recast defaults** icon.

Advanced Application Information Settings

To add or edit advanced application information settings:

1. On the **Environment Settings** page, click the **Deployment Processes** and **Advanced** tabs.

2. In the **Application Information** section, select an application category from the drop-down.

  Available categories: Data Management, Other Apps, Business, Photos & Media, Development & Design, Computer Management, Productivity, Books & Reference, Collaboration & Social

3. Add a description. Maximum of 500 characters.

4. To display the software as a featured application, enable **Display as featured app.**

5. Enter a **Privacy URL**, an **Owner**, and **Administrator Notes**.

6. Scroll down and click **Save & Close**.

Recast

To return options to their default settings, click the **Reset to Recast defaults** icon.
