

# Supersedence

Last Modified on 08.18.25

Deployment process settings to configure the supersedence rules around application versions.

- **Enable supersedence**
  - **Uninstall superseded applications before installation:** Default is 'No'. Right Click Tools Patching can update previous application versions without the uninstall option. The automatic task sequence update feature will not work if this option is set to 'Yes'.
- **Select supersedence method**
  - **Active previous version:** Supersedes all active previous versions that aren't retired (default)
  - **All previous versions:** Supersedes all previous versions that aren't retired
  - **Previous version:** Supersedes only the previous version
