Supercedence

Last Modified on 07.21.25

Deployment process settings to configure the supercedence rules around application versions.

- **Enable supersedence**
  - **Uninstall superseded applications before installation**: Default is 'No'. Application Manager can update previous application versions without the uninstall option. The automatic task sequence update feature will not work if this option is set to 'Yes'**.**
- **Select supercedence method**
  - **Active previous version**: Supercedes all active previous versions that aren't retired (default)
  - **All previous versions**: Supersedes all previous versions that aren't retired
  - **Previous version**: Supercedes only the previous version
