RECAST SOFTWARE

Deployment Settings Common to Configuration Manager

Last Modified on 08.18.25

These advanced settings related to the deployment are the same options available in the Configuration Manager console when creating a new deployment. By default, all these options are set to **No**.

- Allow end users to attempt to repair this application

- Pre-deploy software to the user's primary device

- Send wake-up packets

- Allow metered connections

- Automatically close executables

- Require Admin approval
