

## Proxy Account Requirements for Configuration Manager Integration

Last Modified on 11.28.25

For a Configuration Manager integration, the Recast Proxy must have access to the Configuration Manager environment.

- Grant any of the following built-in roles/role combinations to the proxy account:
    - Full Administrator
    - Operations Administrator
    - Application Administrator **and** Compliance Settings Manager
    - Application Administrator **and** Read-only Analyst
  - Grant modify permissions to the SMB share (UNC path) that will be used to store downloaded applications
  - Access to the necessary external domains. See [System Requirements](#).
-
