

# Edit Deployment Process Settings

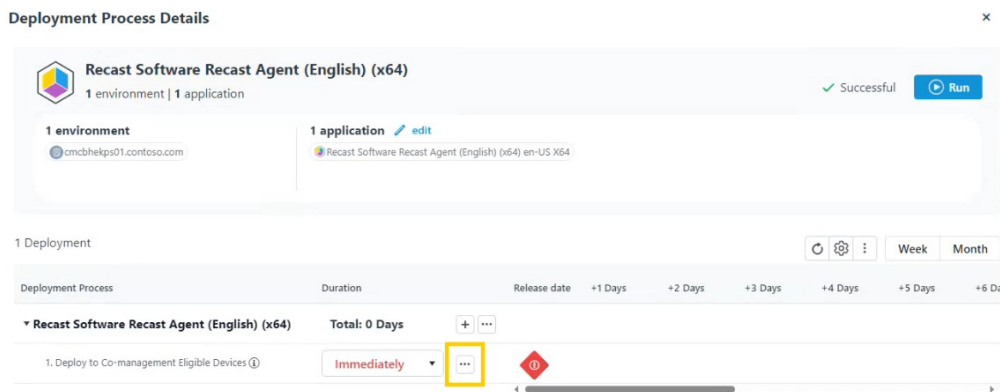

Last Modified on 11.13.24

The settings you can choose at the deployment process or deployment level are the same as those listed under [Global Deployment Process Settings](#) and [Global Deployment Settings](#), but these affect only a single deployment process or deployment.

**NOTE:** Settings marked with a caution icon are set directly within the deployment process. Any changes to global settings won't be inherited by this setting.

To review and/or edit your deployment process settings:

On the **Deployment Process Details** page, click the ellipsis (...) next to a deployment step and select **Manage Settings** from the drop-down.

**Deployment Process Details**
