

Pause a Deployment Process

Last Modified on 03.26.25

When you pause a deployment process, Application Manager temporarily stops importing new versions of the selected applications. If a deployment process is running, it will be paused after completion.

Pause a single deployment process

To pause a deployment process:

1. On the **Deployment Processes** page, click the ellipsis (...) to the far right of the deployment process you want to pause.
2. Select **Pause** from the drop-down menu and confirm the pause.

Deployment Processes

The screenshot shows the 'Deployment Processes' page. At the top right is a blue button '+ Add Deployment Process'. Below it is a search bar and a refresh icon. The main area is a table with the following columns: 'Deployment Process', 'Environment', 'Applications', 'Date Processed', 'Status', 'Total Process Time', and 'Actions'. The first row contains: 'Recast Software Recast Agent (English) (x64)', 'dev-environment', '1', '3/26/2025', 'Successful', and '0 Days'. The 'Actions' column for this row has a dropdown menu open, showing options: 'Run', 'Pause', 'Manage Settings', and 'Delete'. There is also a 'View Details' link next to the dropdown.

The [status of the deployment process](#) will change to **Paused**.

To resume a paused deployment process, click **Run** in the same drop-down menu.

Pause all deployments

You can choose to put all deployments on hold at once.

To pause all deployments:

1. On the **Deployment Processes** page, click the vertical ellipsis next to the search bar.
2. Click **Pause All Deployments**.

Deployment Processes

The screenshot shows the 'Deployment Processes' page. At the top right is a blue button '+ Add Deployment Process'. Below it is a search bar and a refresh icon. A dropdown menu is open next to the search bar, showing the option 'Pause All Deployments'. The table below has the same columns as the previous screenshot: 'Deployment Process', 'Environment', 'Applications', 'Date Processed', 'Status', 'Total Process Time', and 'Actions'.
