

Pause a Deployment Process

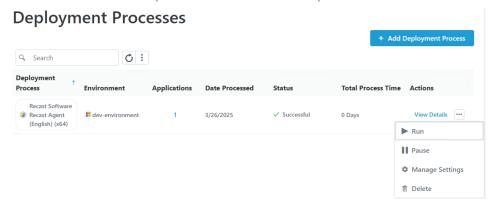

Last Modified on 10.24.25

When you pause a deployment process, Right Click Tools Patching temporarily stops importing new versions of the selected applications. If a deployment process is running, it will be paused after completion.

Pause a single deployment process

To pause a deployment process from the Deployment Processes page:

- 1. On the Patching Deployment Processes page, click the ellipsis (...) to the far right of the deployment process you want to pause.
- 2. Select Pause from the drop-down menu and confirm the pause.

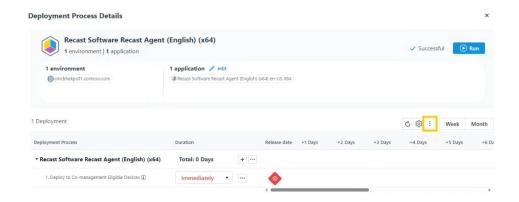

The status of the deployment process will change to Paused.

To resume a paused deployment process, click Run in the same drop-down menu.

To pause a deployment process from the Deployment Process Details page:

On the Deployment Process Details page, click the vertical ellipsis and choose Pause from the drop-down.

Pause all deployments

You can choose to put all deployments on hold at once.

To pause all deployments:

- ${\tt 1.} \ {\tt On the \ Patching \ Deployment \ Processes \ page, \ click \ the \ vertical \ ellipsis \ next \ to \ the \ search \ bar.}$
- 2. Click Pause All Deployments.
