

Reimport Applications

Last Modified on 11.13.24

If a deployment process is deleted and recreated, or an application is accidentally deleted from your Configuration Manager console, you can reimport an application version without the need to wait until a new version is published in the Application Manager catalog. Reimporting an application removes it, and any deployments that include it, from Configuration Manager. The application and deployments are then recreated using the current Application Manager deployment process settings.

You can reimport applications from either the **Applications** page or the **Deploy Process Details** page in your Recast Management Server.

To reimport an application:

1. On the **Applications** page, click the **Deploy** button to the right of the application to reimport.

Applications

Vendor	Application	Date Added	Deployment processes	Version to be Deployed	Actions
ChemAxon	Marvin Suite (English) (x64)	11/11/2024	0	v24.3.2	Deploy
Microsoft	Visual Studio Code (English) (x64)	11/8/2024	0	v1.95.2	Deploy
Opera Software	Opera (English) (x64)	11/6/2024	0	v114.0.5282.154	Deploy

TIP: You can also find the **Reimport Applications** option on the **Deployment Process Details** page by clicking the vertical ellipsis to the right of the Settings cog.

Deployment Process Details

Recast Software Recast Agent (English) (x64)
1 environment | 1 application

1 environment: cmcbhelps01.confoso.com

1 application: Recast Software Recast Agent (English) (x64) en-US X64

1 Deployment

Deployment Process	Duration	Release date	+1 Days	+2 Days	+3 Days	+4 Days	+5 Days	+6 Days
Recast Software Recast Agent (English) (x64)	Total: 0 Days							

1. Deploy to Co-management Eligible Devices (1)

Immediately

2. In the **Reimport Application** side panel that opens, choose whether to redownload the application version from the Application Manager catalog.

3. Click **Reimport Application(s)**.

Reimport Application

1 application

 VideoLAN VLC Media Player (English) (x64) en-US X64 

Reimporting the application(s) removes the existing applications and deployment(s) from the Configuration Manager. Then the application(s) and deployment(s) are recreated using the current deployment process configuration.

 **Warning:** Performing this action will erase any manual changes you've made, including any deployment(s) created in Configuration Manager.

Would you also like to force redownload of the application installation media from Recast Application Catalog?
