

Remove an Application from a Deployment Process

Last Modified on 05.13.24

You can remove an application from an existing deployment process on the **Applications** page in the Recast Management Server interface. When an application is removed, the deployment process will no longer install newer versions of the application. If you remove the only application included in the deployment process, the deployment process itself will be deleted. Old versions of the application will remain in Configuration Manager.

To remove an application from a deployment process:

1. Navigate to the **Applications** page in the Application Manager section of your Recast Management Server.
2. Click the **X** to the far right of the application that you want to remove.
3. Confirm the deletion.

Applications

Vendor	Application	Date Added <small>⌵</small> ⓘ	Deployment processes	Version Currently Installed	Version to be Deployed	Actions
 Adobe	Reader DC (Finnish) (x86)	2/14/2024	0		v23.008.20533	 Deploy 
 Adobe	Reader DC (English) (x86)	11/15/2023	1		v23.006.20380	 Deploy
