

Recast Software Products

Last Modified on 05.08.26

Recast offers two products that empower IT teams to deliver better experiences for their organizations: **Right Click Tools** & **Application Workspace**

Right Click Tools

Manage, visualize, patch, and secure your endpoints – all from one unified product suite.

Editions

- Enterprise Edition: Full-feature version powered by Recast Management Server (RMS)
- Enterprise Edition in Standalone mode: Some functionality limited by the absence of Recast Management Server
- Community Edition: Free version with a limited feature set

For details, see [Right Click Tools Features by Edition](#)

Where to find the Right Click Tools

Access Right Click Tools actions via:

- a [plugin for your Microsoft Configuration Manager console](#)
- a [browser extension for the Microsoft Intune Admin Center](#) or other interfaces

Required Recast Components

- Enterprise Edition: Right Click Tools Console Extension for ConfigMgr and/or Right Click Tools for Intune browser extension, Recast Management Server, Recast Proxy, Recast Agent
- Community Edition: Right Click Tools Console Extension for ConfigMgr and/or Right Click Tools for Intune browser extension

To learn more, see [Tools](#), [Dashboards](#), [Kiosk Management](#), and [Recast Automation](#).

Right Click Tools Enterprise Add-Ons

Insights (formerly Endpoint Insights)

See endpoint data that's otherwise difficult to access or retrieve at scale. Add Insights to Right Click Tools to quickly remediate issues.

Where to find Insights

- Insights is available in your Microsoft Configuration Manager console, SQL Server Reporting Services (SSRS), and Power BI Report Server (PBRS)
- Insights [Warranty Information dashboard](#) and [Device Inventory page](#) are available in your Recast Management Server

Required Recast Components

- Recast Management Server & Recast Proxy (to collect warranty information)
- Recast Agent (to access additional hardware inventory classes)

To learn more, see [Insights](#).

Patching (formerly Application Manager)

Define deployment processes that fully automate the update process for required third-party applications using your

Recast

Microsoft deployment environment (ConfigMgr or Intune).

Where to find Patching

- Patching is integrated into your Recast Management Server

Required Recast Components

- Recast Management Server
- Recast Proxy

To learn more, see [Patching](#).

Privileged Access (formerly Privilege Manager)

Give different personas (end users, service desk users, sysadmins) an elevated level of permissions on individual devices only when needed.

Where to find Privileged Access

- Privileged Access is integrated into your Recast Management Server

Required Recast Components

- Recast Management Server
- Recast Proxy (to use AD or Entra ID objects to target rules)
- Recast Agent

To learn more, see [Privileged Access](#).

Application Workspace

Application Workspace puts employees, not endpoints, at the center of application access to deliver consistent, tailored user experiences throughout the application lifecycle.

To learn more, see [Application Workspace](#), the [End User Guide](#), and the [PowerShell Module](#).

Application Workspace Add-Ons

Access Manager

An integrated single sign-on solution that provides contextual and immediate access to hundreds of applications.

For information about identity providers and connectors, see [Access Manager](#).

Release and Patch Management

Run the latest patches and updates on devices across all applications, versions, platforms, and environments.

To learn more, see [Release and Patch Management](#).
