

Manage User/Group Limiting Rules

Last Modified on 03.27.25

A user or user group limiting rule (previously known as a scope) restricts a user or user group to running actions against a specified subset of users or devices. This type of limiting rule can be used, for example, to give a Help Desk group permission to run actions against only workstation devices.

You can limit a user/group to running actions against one or more of the following:

- Active Directory - domain, OU, group
- Configuration Manager - site, device collection, user collection, user group

Add or Edit a User or User Group Limiting Rule

To add or edit a limiting rule for an existing user or group:

1. On the **Permissions** page, under Recast Users, click the Edit icon to the right of the user or group.

Recast Users

| Name | Identifier | Is Group | Actions |
|---------------------|--|----------|---|
| Administrators | 0-1-0-21-00000000-0000-1000-1000-10000000-1000 | True |   |
| Low Permission User | 0-1-0-21-00000000-0000-1000-1000-10000000-1000 | False |   |

2. In the **Role Assignments** window that opens, under Assigned Roles, select a role.
3. Enable the **Limit this user to specific objects** option.
4. Choose a Configuration Manager or Active Directory **Service Connection**.

5. Select the objects against which the user or group can run actions. For example, you can choose specific Configuration Manager collections and/or Active Directory OUs.

NOTE: You must apply the limiting rule separately for each service connection.

6. Click **Save**.

User/Group Limiting Rule Notes

- A limiting rule that creates a subset of users will not impact actions related to devices.
- A limiting rule that creates a subset of devices will not impact actions related to users.
- If a user or group is included in multiple user/group limiting rules, the user's/group's limiting rules will be an aggregate of all the applied limiting rules.
- If multiple limiting rules are set for a user or group, only one limiting rule needs to be true in order for the validation to pass. For example, if a user is in the limiting rule group, limiting rules applied to the group will also apply to the user.
- Recast Builder actions are permissioned separately. If an action is a **Device Action Type** or **User Action Type**, the device or user value must pass validation. If the action is a **Generic Action Type**, it will remain without a limiting rule.

Remove a User or User Group Limiting Rule

To remove a user or group limiting rule:

1. On the **Permissions** page, click the Edit icon to the right of the user.
2. Under Assigned Roles, select a role.
3. Disable the **Limit this user to specific objects** option.
4. Click **Save**.
