

## Recast Agent not Available in Patching Catalog

Last Modified on 12.02.25

### Probable Cause

A new version of the Recast Agent application becomes available from the Right Click Tools Patching catalog when the Recast Management Server version is greater than that of the Recast Agent. A new Agent application version may not appear in the catalog because your RMS version is older.

### Troubleshooting Steps

If the Recast Agent application is not available in the catalog, try updating your Recast Management Server version.
