

Update Applications With Previous Versions

Last Modified on 08.18.25

You can deploy an application to only devices that have a previous version installed by creating an application-specific collection in Configuration Manager using a query. You can then specify the application-specific collection as a target collection for a deployment process in Patching.

Create an Application-specific Collection

To create an application-specific collection in Configuration Manager:

1. On the Configuration Manager **Membership Rules** page, create a new device collection and add a query rule.

2. Specify a query name and click **Edit Query Statement**.

3. On the **Criteria** tab, add a new criterion with the following properties:

- Criterion Type: Simple value
- Where: Installed Software Product Name
- Operator: is like
- Value: Specify the application name. You can add a wildcard character (%) at the beginning and/or at the end of the application name to find all application versions.

NOTE: You can find a list of product names in your environment by clicking the **Value** button in the Criterion Properties window. The list might not contain all products. The full list can be found on the **Count of all instances of software registered with Add or Remove Programs** report. If the application name in the Application Manager catalog does not exactly match the name in the product list, use the name from the **Value** list or the report.

Example collection for Google Chrome:

Device Collections 7 items	🖼 AM - Google Chrome Properties	×
Search AM - Google Chrome Query Statement Properties General Criteria You can specify criteria to narrow the query and limit the results that are returned. Criteria: Criteria: Installed Software Product Name is like "Google Chrome 2."	Collectic Criterion Properties X General General General Ment Criterion Properties Criterion Properties Collectic Criterion Type: Simple value Criterion Type: Simple value V Whent Installed Software - Product Name	ss. add
	Nue Select Chro is like Value: Google Chrome% Ut Type: String Value	> nat is
Show Query Language OK Cancel	Occu OCCU OK Cancel	pply

Create an Application-specific Deployment Process

To create an application-specific deployment process:

1. On the Application Manager **Deployment Processes** page, click **Add Deployment Process** or modify an existing process.

2. In the **Select Application(s)** side panel that opens, select only the application you want deploy. Click **Next**.

3. Name the deployment process and click **Next**.

4. Add the previously created collection as the target collection and configure a deployment schedule. Make sure that the deployment type is **Required**.

5. If desired, create an additional **Available** type deployment for all users/devices so that the application can be installed from the Software Center to devices without a previous version.

6. Save the deployment process and click **Run**.

Example deployment process for Google Chrome:

1 application 🧪 edit						
© Google Chrome for Business 64-bit en-US X64						
Deployment Process	Duration		Release date +1 Days	+2 Days	+3 Days	+4 Days
▼ Google Chrome for Business 64-bit	Total: 2 Days	+				
1. Deploy to AM - Pilot (3)	Immediately •	•••	0			
Delay 2 days	2 Days 🔹	•••	① 2 Day Delay			
2. Deploy to AM - Google Chrome (3)	Immediately •	•••		0		
3. Deploy to All Users (Immediately •	•••		B
