RECAST SOFTWARE

Intune Deployment Process Supercedence Settings

Last Modified on 08.18.25

Right Click Tools Patching offers a number of settings to configure the supercedence rules around application versions.

To set supercedence options:

1. Choose to **Enable supersedence**: Default is **Yes.**

   You can additionally choose to **Uninstall superseded applications before installation**: Default is **No**. Patching can update previous application versions without the uninstall option. The automatic task sequence update feature will not work if this option is set to **Yes.**

2. Select a **supercedence method**:

   - **All previous versions** (default): Supersedes all previous versions that aren't removed
   - **Previous version**: Supercedes only the previous version

3. Choose a **Maximum Allowed Runtime**: Set Hours and/or Minutes (cannot exceed 12 hours)
