

View & Manage Global Settings

Last Modified on 10.16.24

Add an Environment

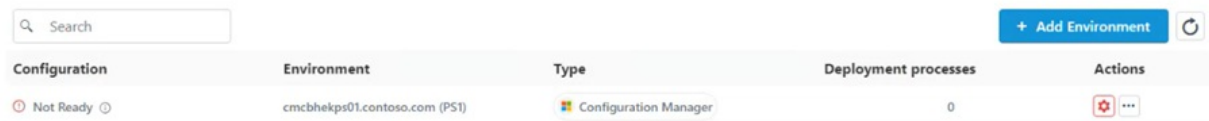

Recast Software Version 5.7.2410.1403 introduces the ability to add multiple environments in Application Manager. Both Configuration Manager and Intune environments are supported.

To add an environment:

1. On the Application Manager **Settings** page, click **Add Environment**.
2. On the **Service Connections** page that opens, click to [add a service connection](#).

With the service connection added, the new environment will appear on the **Settings** page with the Configuration showing as 'Not Ready'.

3. Hover over the information icon to view the required fields that must be completed.
4. To complete the configuration, click the Settings cog.

| Configuration | Environment | Type | Deployment processes | Actions |
|---------------|-------------------------------|-----------------------|----------------------|---------|
| Not Ready ⓘ | cmcbhekps01.contoso.com (PST) | Configuration Manager | 0 | ⚙️ ⋮ |

5. On the **Environment Settings** page that opens, complete the required fields and save your changes.

Back on the **Settings** page, the environment will show as 'Ready' and can be used for deployment processes.

Test an Integration

On the Application Manager **Settings** page, you can test whether a Configuration Manager or Intune integration is set up to function correctly.

The test checks the following:

- Service connection is working properly

- UNC path is accessible
- Required [proxy permissions](#) are in place

To test an integration:

1. On the **Settings** page, under **Actions**, click the ellipsis (...) to open the drop-down menu.
 2. Click **Test Integration**.
-

View Inherited Settings

You can view deployment processes that are inheriting a specific global setting.

To view inheritance for a setting:

1. On the **Application Manager > Settings** page, click the Settings cog to the right of the environment.
2. On the **General, Deployment Processes** or **Deployments** tab, click the View Inheritance icon beside a heading or an individual setting.

NOTE: You'll see a warning at the top of the tab if one or more settings has blocked inheritance.

3. In the **Inheritance** side panel that opens, view or search for the deployment processes that inherit the setting.
-

Delete an Integration

To delete an integration:

1. On the **Settings** page, under **Actions**, click the ellipsis (...) to open the drop-down menu.
 2. Click **Delete Integration**.
-
