View Inherited Settings

Last Modified on 10.16.24

You can view deployment processes that are inheriting a specific global setting.

To view inheritance for a setting:

1. On the **Application Manager** > **Settings** page, click the Settings cog to the right of the environment.

2. On the **General**, **Deployment Processes** or **Deployments** tab, click the View Inheritance icon beside a heading or an individual setting.

   NOTE: You'll see a warning at the top of the tab if one or more settings has blocked inheritance.

3. In the **Inheritance** side panel that opens, view or search for the deployment processes that inherit the setting.
