# Add an Environment

Last Modified on 06.02.25

In Application Manager, you can add multiple Configuration Manager and/or Intune environments. This feature requires Recast Software v5.7.2410.1403 or later.

To add an environment:

1. On the Application Manager **Settings** page, click **Add Environment**.

2. On the **Service Connections** page that opens, click to  add a service connection.

With the service connection added, the new environment will appear on the **Settings** page with the Configuration showing as 'Not Ready'.

3. Hover over the information icon to view the required fields that must be completed.

4. To complete the configuration, click the Settings cog.

5. On the **Environment Settings** page that opens, complete the required fields and save your changes.

Back on the **Settings** page, the environment will show as 'Ready' and can be used for deployment processes.
