## Test an Integration

Last Modified on 11.21.25

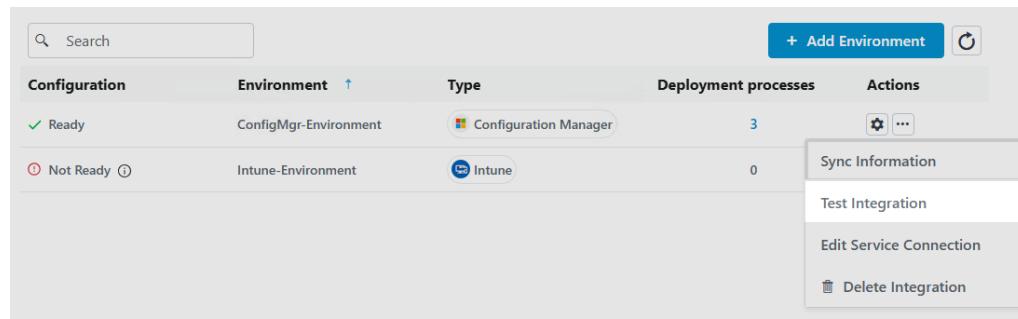

On the Patching Settings page, you can test whether a Configuration Manager or Intune integration is set up to function correctly.

The test checks the following:

- Service connections are working properly
- UNC path is accessible
- Required proxy permissions are in place

To test an integration:

1. On the **Settings** page, under **Actions**, click the ellipsis (...) to open the drop-down menu.
2. Click **Test Integration**.

The screenshot shows a table of environments. The first row, 'ConfigMgr-Environment', is marked as 'Ready' with a green checkmark. The second row, 'Intune-Environment', is marked as 'Not Ready' with a red exclamation mark. The 'Actions' column for the ConfigMgr-Environment row contains a dropdown menu with the following options: 'Sync Information', 'Test Integration' (which is highlighted in grey), 'Edit Service Connection', and 'Delete Integration'. The 'Test Integration' option is the intended choice for testing the integration.

Configuration	Environment	Type	Deployment processes	Actions
✓ Ready	ConfigMgr-Environment	Configuration Manager	3	<a href="#">Sync Information</a> <a href="#">Test Integration</a> <a href="#">Edit Service Connection</a> <a href="#">Delete Integration</a>
ⓘ Not Ready ⓘ	Intune-Environment	Intune	0
