Recast

Recast Software Version 5.7.2412.604

Last Modified on 2026-10-29

Release Date: December 11, 2024

Version 5.7.2412.604 includes a new feature and a number of bug fixes. Upgrade to this Recast Software release by downloading it from the Recast Portal. For instructions on updating to this version, see our articles on upgrading Right Click Tools, Endpoint Insights, Privilege Manager, and Application Manager.

> **KNOWN ISSUE**: A small number of end users have reported a problem when initializing the Right Click Tools console extension. For steps to resolve this issue, see ConfigMgr Issues After Right Click Tools Launch.

New Feature

Recast Management Server

The RMS Agents page now displays Agent Gateway information, making it easy to identify the Gateway server to which an Agent is connected.

Bug Fixes

Recast Management Server

Agent Gateway: Adds the missing .NET 8 hosting bundle on standalone Agent Gateways where .NET 6 is installed. This removes the need in v5.7.2411 to add the hosting bundle separately for standalone Gateways. (Customer-Reported Bug 67469)

Audit Log: Adds missing audit log data after actions are sent to a Recast Agent. (Customer-Reported Bug 46104)

Permissions: Fixes an inability to rename Recast roles. (Customer-Reported Bug 66612)

SQL Database Connection: Fixes an issue where the computer account login is not created when installing RMS with a remote SQL instance.

Right Click Tools

Recast Builder: Fixes an inability to run Builder Actions over a Console Extension route. (Customer-Reported Bug 14033)

Privilege Manager

Target Groups: Fixes an issue where rules are not applied to a device after adding a new target to a target group using the 'Device object' type.

Application Manager

Installation: Fixes the Recast Management Server installer not working for customers licensed for Application Manager Enterprise only. (Customer-Reported Bug 44792)

Application Scheduling: Fixes Application Availability and Application Deadline options that are set 5 hours ahead of the

intended time. (Customer-Reported Bug 64845)

Deployments: Fixes an issue where 7-zip causes a system reboot when deploying applications. (Customer-Reported Bug 67054)

Deployment Process Cleanup

- Stops the **Remove Previous Versions** setting from working when disabled.
- Fixes an error when multiple versions of an application are present in Intune.
