

RECAST SOFTWARE

Recast Software Version 5.7.2412.604

Last Modified on 12.16.24

Release Date: December 11, 2024

Version 5.7.2412.604 includes a new feature and a number of bug fixes. Upgrade to this Recast Software release by downloading it from the [Recast Portal](#). For instructions on updating to this version, see our articles on upgrading [Right Click Tools](#), [Endpoint Insights](#), [Privilege Manager](#), and [Application Manager](#).

KNOWN ISSUE: A small number of end users have reported a Configuration Manager console crash when initializing the Right Click Tools console extension. For steps to resolve this issue, see [ConfigMgr Crashes After Right Click Tools Launch](#).

New Feature

Recast Management Server

The RMS [Agents page](#) now displays Agent Gateway information, making it easy to identify the Gateway server to which an Agent is connected.

Bug Fixes

Recast Management Server

Agent Gateway: Adds the missing .NET 8 hosting bundle on standalone Agent Gateways where .NET 6 is installed. This removes the need in [v5.7.2411](#) to add the hosting bundle separately for standalone Gateways. (Customer-Reported Bug 67469)

Audit Log: Adds missing audit log data after actions are sent to a Recast Agent. (Customer-Reported Bug 46104)

Permissions: Fixes an inability to rename Recast roles. (Customer-Reported Bug 66612)

SQL Database Connection: Fixes an issue where the computer account login is not created when installing RMS with a remote SQL instance.

Right Click Tools

Recast Builder: Fixes an inability to run Builder Actions over a Console Extension route. (Customer-Reported Bug 14033)

Privilege Manager

Target Groups: Fixes an issue where rules are not applied to a device after adding a new target to a target group using the 'Device object' type.

Application Manager

Installation: Fixes the Recast Management Server installer not working for customers licensed for Application Manager Enterprise only. (Customer-Reported Bug 44792)

Application Scheduling: Fixes Application Availability and Application Deadline options that are set 5 hours ahead of the intended time. (Customer-Reported Bug 64845)

Deployments: Fixes an issue where 7-zip causes a system reboot when deploying applications. (Customer-Reported Bug 67054)

Deployment Process Cleanup

- Stops the **Remove Previous Versions** setting from working when disabled.
- Fixes an error when multiple versions of an application are present in Intune.
