Upgrade Pre-5.4 Versions of Right Click Tools

Last Modified on 02.24.25

If you are currently running Right Click Tools Version 5.4.2402.1403 or earlier and are planning an upgrade to Version 5.9.2502.2105 or later, you'll first need to complete an intermediary upgrade to Version 5.4.2403.901.

To upgrade to v5.9.2502.2105 or later via v5.4.2403.901:

1. Install v5.4.2403.901 of the Recast Management Server, Right Click Tools, and Recast Agent software, following the Upgrade Right Click Tools Version instructions.

2. On the RMS **Scopes** page, check that you have a service connection configured for each of your scopes.

   If a service connection is set up for a scope, you should see the following under **Inputs**:

   - For MEMCM service connections: SMSProvider/Sitecode
   - For AD service connections: Domain

3. If needed, add any missing service connections.

4. Install v5.9.2502.2105 or later of the Recast Management Server, Right Click Tools, and Recast Agent software, following the Upgrade Right Click Tools Version instructions.
