

RECAST SOFTWARE

# Run System Information in Configuration Manager

Last Modified on 06.10.25

When accessing the System Information tool via the Recast Console Extension in your ConfigMgr console, actions can be run on single and multi-selected devices, or with a [similar tool designed for device collections](#).

**NOTE:** When running System Information against multiple devices or a collection, each device is shown in the results and can be multi-selected.

To run the tool in ConfigMgr:

1. Right-click on one or more device names.
2. Select **Right Click Tools > Console Tools > System Information**.

To learn more about the System Information tool, see [Remote Device Troubleshooting](#) on our YouTube channel.
