

Delete Device(s) From Azure (Intune/Entra)

Last Modified on 01.19.26

Use the **Delete Device(s) From Azure (Intune/Entra)** tool to remove a device from Intune and/or Entra. The device will lose its trust relationship with Azure and prevent users from logging into the device. This tool can be run on single and multi-selected devices from within Configuration Manager or Intune. This action can only run over a Recast Proxy route.

This feature does not currently work in [Recast Builder](#).

Prerequisites

- [Recast Management Server installed with Recast Proxy](#)
- The App Registration for your Entra ID (Azure Active Directory) service connection includes the following Microsoft Graph API **Application** permissions:
 - **DeviceManagementManagedDevices.ReadWrite.All** – for deleting devices from Intune
 - **Device.ReadWrite.All** – for deleting devices from Entra

For more information, see our article on [setting up Graph API permissions for Right Click Tools](#).

- [Service connection from your Recast Management Server to Entra ID \(Azure Active Directory\)](#)
- Minimum Recast Software version: 5.10.2508.1302
- Minimum Right Click Tools for Intune browser extension version: 2.0.0.6

To run the tool:

1. Right-click on one or [more](#) devices.
2. Select **Right Click Tools > Console Tools > Delete Device(s) From Azure (Intune/Entra)**.
3. Enable **Delete from Intune** and/or **Delete from Entra**.
4. Confirm the deletion.

NOTE: The device list in Intune may be slow to update.
