Recast

What's New in Right Click Tools

Last Modified on 2026-10-28

We're continually developing new features for Right Click Tools, many of which originate with ideas and requests from our Enterprise customers and Community users.

Right Click Tools features delivered recently:

Customize the Actions You Enable by Policy: Choose the RCT actions that are visible and enabled in the Browser Extension to create pared-down menus that only display the tools that are allowed and relevant in your environment. For steps, see Choose Enabled Right Click Tools by Policy. Minimum Right Click Tools Version: 5.13.2610, Minimum browser extension version: 3.5.0.0.

Remote Event Viewer Tool: Browse, filter, search, and analyze Windows Event Log data from remote devices without direct network connectivity to the endpoint. The Remote Event Viewer works best when used with Right Click Tools Enterprise and Recast Agent. For details, see Remote Event Viewer.

NOTES:

- In the Community edition, as well as in Right Click Tools Enterprise Standalone, the RCT Remote Event Viewer exhibits the same direct network connectivity limitations as the native Windows Event Viewer.
- Remote Tools are not available to customers with Right Click Tools Enterprise Legacy licensing.

Minimum Right Click Tools Version: 5.13.2610, Minimum browser extension version: 3.5.0.0.

Run Intune-specific Right Click Tools Actions with Community Edition: Community users can now run Microsoft Graph-based actions using the Right Click Tools browser extension. Previously, RCT's Graph-dependent actions required a service connection from a Recast Management Server to Entra ID, which excluded Community users since they cannot create service connections.

Intune actions available in the Community Edition:

- Entra ID Security Groups
- Set Autopilot Group Tag
- Remove Devices from Autopilot
- Delete Devices from Azure (Entra/Intune)

Minimum Right Click Tools Version: 5.12.2609, Minimum browser extension version: 3.4.0.0.

Pre-define Your Recast Management Server or Recast Cloud URL by Policy: As a Right Click Tools admin, you can preset the URL for your Recast Management Server/Recast Cloud instance using a Registry value. Doing so lets RCT Browser Extension users enable multi-device actions and new web experiences, like the System Information side panel, without each user having to manually configure the URL. For details, see Set RMS/Recast Cloud URL by Policy. Minimum Right Click Tools Version: 5.12.2609.

Remote Registry Multi-Device Support: Open the Remote Registry tool and connect to multiple computers within the same window. This functionality also works to launch Remote Registry against multiple devices in your Recast Management Server and the RCT Browser Extension. Minimum Right Click Tools Version: 5.12.2609, Minimum browser extension version: 3.4.0.0.

Recast Remote Registry Tool: You can now run familiar Remote Registry actions (such as creating, editing, and deleting registry keys and values) on remote devices without a direct network connection. The Remote Registry tool functions optimally when used with Right Click Tools Enterprise and the Recast Agent component. To learn more, see Remote Registry.

- In the Community edition, as well as in Right Click Tools Enterprise Standalone, the RCT Remote Registry tool will exhibit the same direct network connectivity limitations as Windows Remote Registry.
- Remote Tools are not available to customers with Right Click Tools Enterprise Legacy licensing.

Recast

Minimum Right Click Tools Version: 5.12.2608, Minimum browser extension version: 3.3.0.0.

Enroll Recast Agents over an Agent Gateway: You can now enroll Recast Agents via Agent Gateway, meaning that you can register devices with Recast Agent installed without the need for direct line of sight to your Recast Management Server. This feature resolves a significant challenge for remote or internet-based devices. This method of registering Recast Agents, which also works for Recast Proxies and Agent Gateways, requires the use of enrollment keys, which allow for secure authentication without relying on same-domain trust or manual approval in RMS. Learn more about registering **Agents**, **Proxies**, and **Agent Gateways** with RMS using Enrollment Keys. Minimum Right Click Tools Version: 5.12.2607.

Remote File Explorer Tool: You can now browse and manage files securely on remote devices even where direct network connectivity, permissions, or tooling limitations prevent reliable access. The Remote File Explorer works best when used with the Recast Agent component in Right Click Tools Enterprise. For more information, see Remote File Explorer.

- In Right Click Tools Community, expect the RCT Remote File Explorer to have the same direct network connectivity limitations as the equivalent feature in Microsoft Windows.
- Remote Tools are not available to customers with Right Click Tools Enterprise Legacy licensing.

Minimum Right Click Tools Version: 5.12.2607, Minimum browser extension version: 3.2.0.0.

Restart the Intune Management Extension Service: The Intune Management Extension works with timers and the Windows Notification Service, and the timers can add a delay of up to 60 minutes. This new Right Click Tool simply restarts the Intune Management Extension service, which removes the delay, so that application installs and scripts run sooner. This tool is available via the Right Click Tools Console Extension and the Right Click Tools browser extension. See Restart Intune Management Extension Service. Minimum Right Click Tools Version: 5.11.2606, Minimum browser extension version: 3.1.0.0.

Export quick reports from Remote Windows Security: As a follow-up to the quick reports function that made its appearance in the System Information and Client Information tools last month, you can now export the data on individual tabs in Remote Windows Security. This feature expands on a popular request in the Ideas Portal. Minimum Right Click Tools Version: 5.11.2606.

Access Right Click Tools from Intune's New Single Device Details Page: Microsoft has redesigned Intune's details page for individual devices and you'll now find the Right Click Tools icon and menus on that page. Minimum Right Click Tools Version: 5.11.2606, Minimum browser extension version: 3.1.0.0.

View Secure Boot Certificate Update Status in Remote Windows Security: On the **Remote Windows Security** > **Firmware** tab, you can now view the Secure Boot certificate update status, as well as readiness and reported error details. This information helps identify devices still using 2011 Secure Boot certificates that begin **expiring in June 2026**. You can also click the **Run Secure Boot Task** button to kick off a built-in scheduled task that helps move eligible devices to the updated certificate chain ahead of the June deadline. Devices using an expired certificate will not receive future boot-chain security protections. Minimum Recast Software Version: 5.11.2605.

Export Quick Reports from System Information and Client Information Tabs: You can now export the data on individual tabs in the System Information and Client Information tools. This feature delivers on a popular request in the Ideas Portal. Minimum Recast Software Version: 5.11.2605.

Access Right Click Tools from More Intune Pages: You can now open Right Click Tools menus from a number of additional Intune Admin Center pages, meaning that you no longer have to navigate to the Devices page to find Right Click Tools actions.
Look for the Recast icon on these pages:

- Device install status
- Overview > Device install status
- Monitor > Device install status
- Antivirus (tabs)
- Disk encryption
- Discovered app devices
- Certificates

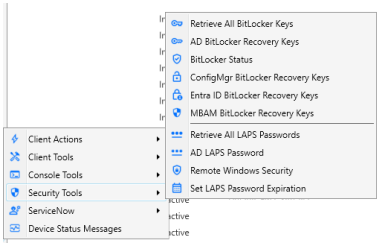

- Device actions
- Noncompliant devices
- Policy noncompliance
- Encryption report
- Assignment failures
- Feature update failures
- Window driver update failure
- Enrollment time grouping failures
- **Groups** > *select group* > **devices**
- **Devices | Configuration** > **View Report** > click on device

Minimum Recast Software Version: 5.11.2604, Minimum browser extension version: 3.0.0.0.

Launch Intune Remote Help: Leverage Microsoft's cloud-based remote support functionality by quickly opening an Intune Remote Help session via Right Click Tools. This feature is available within the Right Click Tools console extension and the Right Click Tools for Intune browser extension. Remote Help currently requires additional Intune licensing for most customers; later this year, it will be included in M365 E3. For prerequisites, see Open Intune Remote Help. Minimum Recast Software Version: 5.11.2603, Minimum browser extension version: 2.0.0.11.

Retrieve LAPS Passwords from Active Directory and Entra with One Tool You can now view and copy Local Administrator Password Solution (LAPS) passwords from Active Directory and/or Entra using a single Right Click Tool. For the how-to, see Retrieve All LAPS Passwords. Minimum Recast Software Version: 5.11.2602, Minimum browser extension version: 2.0.0.10.

Find That Right Click Tool Faster: Right Click Tools menus now display a representative icon for each action, adding visual clarity that helps you home right in on the right Right Click Tool. Minimum Recast Software Version: 5.11.2602, Minimum browser extension version: 2.0.0.10.

Enhancements to Classic Right Click Tools

- **System Information**: Enable & disable devices on the Drivers tab.
- **Remote Windows Security:** View the BIOS Version on the Firmware tab.
- **Schedule Shutdown / Restart**: Add a custom message that will be displayed to end users ahead of a scheduled shutdown/restart.

  Minimum Recast Software Version: 5.11.2602, Minimum browser extension version: 2.0.0.10.

A Better Recast Builder Experience: We've updated the Recast Builder interface to make automation easier.

Highlights:

- Collapsible Builder Actions, Recast Actions, and Item Properties panels expand the workflow canvas
- Import and export functions in the Builder Actions panel
- Tooltip descriptions of pre-built workflows
- Quick Links to the Recast Help Center and Community Recast Automation Repository
- Alphabetically sorted categories and improved search capabilities in the Recast Actions panel
- Ability to expand working area in the Item Properties panel (useful when developing scripts)
- Updated font choices and a simplified color palette
- Plus, canvas layouts that save as they should!

  Minimum Recast Software Version: 5.11.2602

Recast

Windows Autopilot Actions

- Register Device(s) in Autopilot – Minimum Recast Software Version: 5.11.2601, Minimum browser extension version: 2.0.0.9
- Add/Edit Group Tags in Autopilot – Minimum Recast Software Version: 5.11.2512, Minimum browser extension version: 2.0.0.8
- Remove Device(s) from Autopilot – Minimum Recast Software Version: 5.11.2510, Minimum browser extension version: 2.0.0.7

Run Recast's Intune-Focused Tools on Multiple Devices at Once: Multi-select devices in Intune before running actions, including the Delete Devices from Intune/Azure, Add Devices to an Entra Group, and Sync Intune App and Compliance Policy tools.

> Minimum Recast Software Version: 5.11.2509 for the new Intune-specific tools, 5.10.2506 for existing tools

New Entra ID- and Intune-Specific Tools

- Delete Devices from Entra and/or Intune
- Sync Intune App and Compliance Policy
- Add Devices to an Entra Group

> Minimum Recast Software Version: 5.10.2508, Minimum browser extension version: 2.0.0.6

Support for GCC High Environments in Intune: You can now run Right Click Tools in GCC High environments using the Right Click Tools for Intune browser extension. Minimum Recast Software Version: 5.10.2508, minimum browser extension version: 2.0.0.6
