

Check for Application Version Updates

Last Modified on 10.06.25

By default, Right Click Tools Patching checks the Patching Catalog for application updates every 30 minutes. You can also choose to manually trigger a check for any new versions of applications included in a deployment process.

To check for application updates on the **Deployment Process Details** page, click **Check for Updates**.

If an application included in the deployment process has an update available, the deployment process will run.

The screenshot shows the 'Deployment Process Details' interface for the application 'Notepad++ Team Notepad++ (English) (x64)'. The application is in a 'Pending Run' state. The interface includes a 'Check for Updates' button. Below the application details, there is a table showing the deployment process. The table has columns for 'Deployment Process', 'Duration', 'Release date', and a timeline from '+1 Days' to '+6 Days'. The deployment process listed is '1. Deploy to All Devices (Intune Built-In Group)' with a duration of 'Total: 0 Days' and a status of 'Immediately'.

Deployment Process	Duration	Release date	+1 Days	+2 Days	+3 Days	+4 Days	+5 Days	+6 Days
▼ Notepad++ Team Notepad++ (English) (x64)	Total: 0 Days							
1. Deploy to All Devices (Intune Built-In Group)	Immediately
