Network Architecture: Right Click Tools Patching

This network architecture diagram includes Recast components, as well as internal and external connections, that are required to implement Right Click Tools Patching.

Installation Notes

- The Recast Management Server can be installed on the primary Configuration Manager server or on another server.
- The Recast Proxy can be installed on the same server as RMS or on a separate server.

Network Architecture: Patching in an Air-Gapped ConfigMgr Environment

In Configuration Manager environments that are disconnected from the internet, you can still use Right Click Tools Patching to update metadata and content. To learn more, see Synchronize software updates from a disconnected software update point | Microsoft Learn.
