

## View Applications in ConfigMgr to Update with RCT Patching

Last Modified on 02.18.26

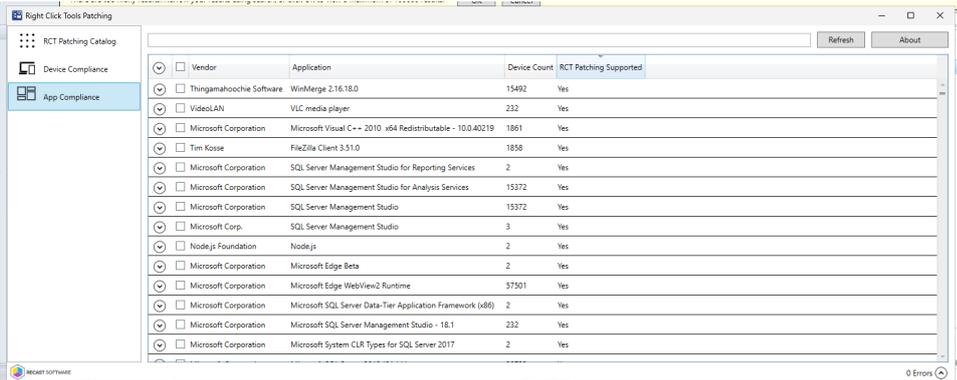

Right Click Tools Enterprise customers and Community users can easily identify the applications in their environment that are available to update using Right Click Tools Patching. The App Compliance tab in your ConfigMgr console displays the applications in the RCT Patching catalog that are detected in your Add/Remove Programs inventory.

### NOTES:

- Anonymized ConfigMgr hardware inventory data is sent to Recast and matched to the Right Click Tools Patching catalog.
- This feature requires outbound access to the Patching catalog at <https://amprod02.recastsoftware.com>.
- You do not require a Patching license to view and search the App Compliance tab.
- This feature is available in [Recast Software Version 5.11.2512.1807](#) or later.
- Each column is sortable and all catalog information is searchable.

To locate the RCT Patching App Compliance tab in your ConfigMgr console:

1. Navigate to **Assets and Compliance > Overview > Devices**.
2. Right-click on a device and select **Patching > Catalog Search**.

Vendor	Application	Device Count	RCT Patching Supported
Thingamahoochie Software	WinMerge 2.16.18.0	15492	Yes
VideoLAN	VLC media player	232	Yes
Microsoft Corporation	Microsoft Visual C++ 2010 x64 Redistributable - 10.0.40219	1861	Yes
Tim Kosse	FileZilla Client 3.51.0	1858	Yes
Microsoft Corporation	SQL Server Management Studio for Reporting Services	2	Yes
Microsoft Corporation	SQL Server Management Studio for Analysis Services	15372	Yes
Microsoft Corporation	SQL Server Management Studio	15372	Yes
Microsoft Corp.	SQL Server Management Studio	3	Yes
Node.js Foundation	Node.js	2	Yes
Microsoft Corporation	Microsoft Edge Beta	2	Yes
Microsoft Corporation	Microsoft Edge WebView2 Runtime	57501	Yes
Microsoft Corporation	Microsoft SQL Server Data-Tier Application Framework (x86)	2	Yes
Microsoft Corporation	Microsoft SQL Server Management Studio - 18.1	232	Yes
Microsoft Corporation	Microsoft System CLR Types for SQL Server 2017	2	Yes

The App Compliance tab displays the following application information:

- **Vendor**
- **Application name**
- **Device Count** – number of machines on which the application is installed, requires [SQL database access](#)
- **RCT Patching Supported** (Yes/No)

Click the **About** button for details about current and future functionality:

"The App/Device Compliance tools compare your ConfigMgr hardware inventory data to Recast's Right Click Tools Patching catalog. In our initial release, the resulting report shows which applications could be patched with Right Click Tools Patching. Future versions will display the vendor's current version, counts of devices, and CVE information. Inventory data is anonymized."
