

Recast Management Server / Recast Cloud Features

Last Modified on 2026-06-12

Whether you deploy the Right Click Tools Enterprise suite using a self-hosted Recast Management Server or Recast Cloud (now available as an Advanced Preview), you'll have a central location where you can configure and monitor Right Click Tools and its Insights, Privileged Access, and Patching add-ons.

Recast Management Server/Recast Cloud Features by Product/Add-On

Right Click Tools Enterprise	<ul style="list-style-type: none"> Role-based permissions that grant or limit access to specific Tools Advanced audit logging that allows administrators to see which actions were run and which users initiated the actions Scheduling of some Right Click Tools actions and Recast Builder actions Use of Recast Proxy to run actions against computers using a service account Use of Recast Agent to run actions against computers in untrusted domains, workgroups, or over the ConfigMgr Cloud Managed Gateway Access to five Right Click Tools web dashboards
Right Click Tools Insights	Enables the collection of warranty information and displays the Insights Warranty Information dashboard and Device Inventory page.
Right Click Tools Privileged Access (previously Privilege Manager)	Integrated into your Recast Management Server or Recast Cloud instance
Right Click Tools Patching (previously Application Manager)	Integrated into your Recast Management Server or Recast Cloud instance

Recast Management Server and Component Requirements

Many Recast Software features require the installation of Recast Management Server, Recast Proxy and/or Recast Agent. Unless otherwise noted, a checkmark (✓) indicates that a Recast component must be installed to fully enable product features and functionality.

	RMS	Recast Proxy	Recast Agent
Right Click Tools	✓	✓	✓
Role-based Administration	✓		
Advanced Logging	✓		
Web Dashboards	✓	✓	
Kiosk Management	✓♦	✓	
Automation	✓♦	✓	
Insights	✓♦	✓	✓
Privileged Access	✓	✓♦	✓
Patching	✓	✓	

♦ Kiosk Manager and Workflow Automation require RMS to schedule actions.

♦ Insights requires RMS to collect warranty information.

Recast

◆ Privileged Access requires a Recast Proxy to use AD or Entra ID objects to target rules.
