

3.4

Last Modified on 04.16.26

This version is no longer supported. Upgrade to the latest version to ensure continued functionality and support.

See [Support Lifecycle](#) for more details.

3.4.2300

Bugfixes

- Copying packages can result in double escaped special characters in package name.
- Javascript error can occur while switching between pages quickly.

3.4.2265

Bugfixes

- Identity source LDAP can report 'No servers configured' when all configured servers are marked bad.
- Unable to pair a satellite server with a zone that has CORS security enabled.

3.4.2258

Bugfixes

- Deployment package filters could show 'Unknown' references to contexts.

3.4.2237

Bugfixes

- Stop process action can report errors on processes that are already closed.

3.4.2230

Bugfixes

- A corrupt managed desktop icon causes the native icon feature to stop working.

3.4.2216

Bugfixes

- RDS connector could fail with the message "Provider load failure".
- Uploaded script didn't support UTF-8.

Recast

- The sorting in stored views were not correct.
- New connectors that are accessed through a satellite server could return an empty resource list.

3.4.2188

Bugfixes

- An expired session could trigger a javascript warning.
- Agent registration doesn't work properly for users without a workspace.

3.4.2167

Changes

- Following languages has been added to the Setup Store Connector:
 - Chinese (Traditional)
 - Chinese (Simplified)
 - Turkish
 - Norwegian
 - Danish
 - Japanese

3.4.2125

Bugfixes

- Search results in contacts could trigger a JavaScript error.

3.4.2122

Bugfixes

- Timeout issues on creating or updating multiple resources from a connector.
- Deployment progress bar does not correctly show installation progress.
- JavaScript error in the Launcher when trying to select a file within a Personal Package or action.

3.4.2118

This update for Liquit Workspace focuses on hardening security. We have enhanced the following components:

- Multiple security enhancements after external audit.

3.4.2104

Changes

- Improved support for upcoming changes to web browsers involving how popups are handled.

Recast

Bugfixes

- Windows Server 2019 is detected as Windows Server 2016.

3.4.2097

Bugfixes

- Upgraded jQuery to the latest version because of CVE-2020-11022 and CVE-2020-11023.

3.4.2090

Bugfixes

- Variables defined on contexts are not working as expected.
- Webserver can crash on a specialized malformed URL.
- RDP schema not supported in the latest version of macOS.
- Event triggers for packages don't work on Development, Test and Acceptance stage entitlements.

3.4.2069

Bugfixes

- Error prompt "An unknown error has occurred" could occur when viewing permissions from a user or group.
- When enabling and/or disabling an action within a package, will not trigger a new version within the UI.

3.4.2041

Bugfixes

- Prevent variable names to start with a '\$'-sign.
- CSP could prevent EULA from being visible.

3.4.2034

Bugfixes

- Variables defined on packages aren't working when launching a package without an agent running.
- A maximum of 100 group memberships are shown on a Azure AD group in the management interface.

3.4.2027

Bugfixes

- Improve agent offline detection.
- IE11 shows script error when DOM storage is disabled.
- Unable to read/change Filter Sets on Action Sets with the PowerShell Module.

Recast

3.4.2017

Bugfixes

- Issue that causes offline mode to not function correctly.

3.4.2013

Changes

- Added agent configuration options to redirect Cache and Temp paths.

Bugfixes

- Liquit variables defined within a package aren't used.
- Packages are still pre-distributed if offline mode is disabled within the Agent configuration.
- Server doesn't set SameSite attribute correctly for cookies.

3.4.2006

Bugfixes

- Login screen unavailable when federated authentication is configured and ?sso=0 URL parameter is used.
- Portal integrations hangs on the authorization endpoint in IE 11.
- Searchbar autocomplete keeps showing in latest version of Google Chrome.
- Overriding login background image in context doesn't work.

3.4.1999

Changes

- Added support for user only installed version of the remote desktop app for WVD.

Bugfixes

- Uploaded script action could cause the script content to disappear after multiple saves.
- Running Liquit Workspace in embed mode will hijack back and forward button within the browser.
- Quickly switching between pages within the management interface could trigger a javascript error.

3.4.1988

Bugfixes

- Workspace fails to load when agent fails to register with server when incorrect registration credentials are configured in agent.xml.
- Native icons within Windows aren't removed on agent refresh when disabled on all packages within entitlements.
- Content upload within Liquit Workspace timeouts after 15 minutes.
- Workspace search doesn't behave the same as Catalog search when "Show disabled apps" is enabled.
- Scrollbar resets on dragging a package within deployments.

Recast

3.4.1964

Bugfixes

- New-LiquitContent PowerShell cmdlet could cause AllowWriteStreamBuffering error when trying to upload a file.
- PowerShell is unable to connect to Liquit Workspace Server if TLS 1.0 or lower is disabled.
- Filter Set operator (and/or) works in reverse when no agent is running.
- Adding content attribute in PowerShell to an action could fail to set Content link.
- When pending changes are present while trying to delete the entity will prompt for pending changes.

3.4.1955

Changes

- Added support for Microsoft Edge (Chromium).

Bugfixes

- When double click is enabled, the "Get" button within the catalog also requires double click.
- Liquit Workspace connector entitlement synchronization doesn't work.

3.4.1946

Changes

- Minor overall performance improvement.
- Login performance improvement for authenticated sessions.

Bugfixes

- Issue with Single Logout feature not always working i.c.m. SAML2 IDP.
- Liquit Browser woud sometimes not show to the end-user when requested.
- Mobile field not being included with an Azure AD identity source.
- When switching sessions within the Remote Control dialog causes JavaScript error.

3.4.1936

Changes

- Added SameSite attribute to session cookie(s).
- Added support for ADFS on a Azure AD identity source.

Bugfixes

- Missing 'Create Server' permissions in default Administrator policy.
- Liquit Workspace Connector synchronized entitlements with Refresh event is created as Device Startup event.
- Agent reports user cancel event as 'Uninstall' when user cancels an installation action set.
- UI is not properly updated with the zone managed option in the Satellite Server.
- A warning is displayed in the server logs about failed to delete content file(s) in the SQL database.

3.4.1929

Bugfixes

- IP address field allows spaces in subnet filter, which causes filter to fail.
- Missing auto complete feature in add package wizard.
- Missing stage option in connector entitlement transformation/static rules.
- When double selecting a tab or team in the side menu, causes filters to expand.
- Local time field not shown when adding a new schedule.

3.4.1915

Bugfixes

- Clean sessions task uses incorrect timezone to detect if sessions are no longer active.

3.4.1908

Bugfixes

- When "Show disabled apps" under catalog is enabled, it will also hide all non-web packages when agent is running
- Agent not triggering LiquitLogin event when run outside of the launcher
- Unable to add credential/context link attribute using PowerShell

3.4.1897

Bugfixes

- Missing `#{UserProfile}` variable in auto complete.
- User-defined local link gets disabled within the Workspace after editing.
- User mobile not supported in context filters.
- A timeout could occur when uploading large files using PowerShell.

3.4.1887

Bugfixes

- Fix clicking on a telephone number within the launcher triggers a full refresh
- Liquit Workspace connector doesn't properly synchronize action set filters

3.4.1878

Bugfixes

- Unable to open server object within Liquit Workspace if server has an IPv6 address as primary address.
- Content replication issue between multiple servers.

3.4.1873

Recast

Changes

- Performance enhancement when loading the workspace without an agent.

Bugfixes

- Synchronize option was incorrectly available for the Setup Store connector.
- Restrict length of error message on login page.

3.4.1859

Satellite server

Satellite Server allows for connectors to operate securely on-premise, while the Liquit Workspace runs from the cloud. Especially useful when you are using for example terminal servers and/or print servers locally.

General changes

- Performance enhancements.

Interface

- Improved dialogs to indicate importance of the dialog.
- Error messages are made more user-friendly across the Liquit Workspace.

Introduction

- Introduction screen has been updated.

Contexts

- Login settings have been added to contexts.

Connectors

- A configured connector can now be run on a satellite server. This allows connectivity to local resources over an HTTPS connection (to the Satellite Server).

Events

- Events are now converted to the localized time.

Identity sources

- It is now possible to hide users from the local identity source for the contacts view.
- Added support for display names on identity sources.

Packages

- Actions can be copied within the package.
- Filters can now be configured on action sets.
- "Primary Context" filter has been renamed to "Context" filter, it is now possible to select within all effective contexts instead of only the primary context.
- An option for disabling prefetching on content is available on actions.
- New "File Size" filter allows you to check an individual file for its size.
- New "MSI Installed" filter allows you to check if an MSI is already installed by its product code.
- New "Free Disk Space" filter allows you to check if a certain disk has a minimum size available.
- New "Refresh agent" action has been added, allows you to refresh the agent

Recast

- Added "Wait for completion" option to "Set service state" action.

Zones

The following security options are added to the individual zones:

- HTTP Strict Transport Security
 - Content Security Policy
 - Cross-Origin Resource Sharing
 - Transport Layer Security 1.3
 - Server Name Indication
-
