

3.3

Last Modified on 04.16.26

This version is no longer supported. Upgrade to the latest version to ensure continued functionality and support.

See [Support Lifecycle](#) for more details.

3.3.2097

Bugfixes

- Upgraded jQuery to the latest version because of [CVE-2020-11022](#) and [CVE-2020-11023](#).

3.3.2090

Bugfixes

- Variables defined on contexts are not working as expected.
- Webserver can crash on a specialized malformed URL.
- RDP schema not supported in the latest version of macOS.
- Event triggers for packages don't work on Development, Test and Acceptance stage entitlements.

3.3.2069

Bugfixes

- Error prompt "An unknown error has occurred" could occur when viewing permissions from a user or group.
- When enabling and/or disabling an action within a package, will not trigger a new version within the UI.

3.3.2041

Bugfixes

- Prevent variable names to start with a '\$'-sign.

3.3.2034

Bugfixes

- Variables defined on packages aren't working when launching a package without an agent running.
- A maximum of 100 group memberships are shown on a Azure AD group in the management interface.

3.3.2027

Recast

Bugfixes

- Improve agent offline detection.
- IE11 shows script error when DOM storage is disabled.

3.3.2013

Changes

- Added agent configuration options to redirect Cache and Temp paths.

Bugfixes

- Liquit variables defined within a package aren't used.
- Packages are still pre-distributed if offline mode is disabled within the Agent configuration.
- Server doesn't set SameSite attribute correctly for cookies.

3.3.2006

Bugfixes

- Login screen unavailable when federated authentication is configured and ?sso=0 URL parameter is used.
- Searchbar autocomplete keeps showing in latest version of Google Chrome.
- Overriding login background image in context doesn't work.

3.3.1999

Bugfixes

- Uploaded script action could cause the script content to disappear after multiple saves.
- Running Liquit Workspace in embed mode will hijack back and forward button within the browser.
- Quickly switching between pages within the management interface could trigger a javascript error.

3.3.1988

Bugfixes

- Workspace fails to load when agent fails to register with server when incorrect registration credentials are configured in agent.xml.
- Native icons within Windows aren't removed on agent refresh when disabled on all packages within entitlements.
- Content upload within Liquit Workspace timeouts after 15 minutes.
- Workspace search doesn't behave the same as Catalog search when "Show disabled apps" is enabled.

3.3.1964

Bugfixes

- New-LiquitContent PowerShell cmdlet could cause AllowWriteStreamBuffering error when trying to upload a file.
- PowerShell is unable to connect to Liquit Workspace Server if TLS 1.0 or lower is disabled.
- Filter Set operator (and/or) works in reverse when no agent is running.

Recast

- Adding content attribute in PowerShell to an action could fail to set Content link.
- When pending changes are present while trying to delete the entity will prompt for pending changes.

3.3.1953

Changes

- Added support for Microsoft Edge (Chromium).

Bugfixes

- When double click is enabled, the "Get" button within the catalog also requires double click.

3.3.1946

Bugfixes

- Issue with Single Logout feature not always working i.c.m. SAML2 IDP.
- Liquit Browser would sometimes not show to the end-user when requested.
- Mobile field not being included with an Azure AD identity source.
- When switching sessions within the Remote Control dialog causes JavaScript error.

3.3.1936

Changes

- Added SameSite attribute to session cookie(s).

Bugfixes

- Liquit Workspace Connector synchronized entitlements with Refresh event is created as Device Startup event.
- Agent reports user cancel event as 'Uninstall' when user cancels an installation action set.

3.3.1929

Bugfixes

- IP address field allows spaces in subnet filter, which causes filter to fail.
- Missing auto complete feature in add package wizard.
- Missing stage option in connector entitlement transformation/static rules.

3.3.1915

Bugfixes

- Clean sessions task uses incorrect timezone to detect if sessions are no longer active.
- When "Show disabled apps" under catalog is enabled, it will also hide all non-web packages when agent is running
- Unable to add credential/context link attribute using PowerShell

Recast

3.3.1897

Bugfixes

- Missing `${UserProfile}` variable in auto complete.
- User-defined local link gets disabled within the Workspace after editing.
- User mobile not supported in context filters.

3.3.1887

Bugfixes

- Unable to open server object within Liquit Workspace if server has an IPv6 address as primary address.
- Fix clicking on a telephone number within the launcher triggers a full refresh

3.3.1859

Changes

- Performance improved of clean events task.

Bugfixes

- Add personal app icon was invisible on white backgrounds.
- Context filtering didn't work during deployments.
- Launcher window doesn't restore window position/size correctly when used with Aero Snap.

3.3.1845

Bugfixes

- Checkbox not properly working in Internet Explorer.
- Agent setup is unable to decode Liquit domain from filename if there are non base64 characters present.

3.3.1831

Changes

- Option to hide packages within the catalog which requires an agent, when no agent is available.

Bugfixes

- RDP files and connection are handled correctly for iOS 13.
- Logout page wouldn't embed logout actions for Safari.

3.3.1824

Changes

Recast

- Added support for context awareness to settings during login.

Bugfixes

- Content distribute event is triggered on every launch.
- Search field will not reset when a package has been added on a context/user/group/device/collection page.
- Token refresh during an upgrade of the server could cause a 'Server not found' screen in the launcher.
- Unable to retrieve resources from Microsoft WVD connector.
- Optimize DB task fails with 'Invalid object name AuthContracts'.

3.3.1814

Bugfixes

- Missing credentials option for uploaded script.
- Unable to launch uploaded RDP file action with credentials when no agent is available.
- Get-LiquitScheduledTask returns error "A null value was found for the property named 'weekDay', the expected type does not allow null values".
- Events reported by agent have an incorrect created time.
- Connector entitlement synchronization doesn't support context and device collections.

3.3.1782

Bugfixes

- Only 4 package entitlements are visible without requiring to scroll.
- In progress tasks aren't properly reset on server restart.
- Unable to use Remove-LiquitPackageSnapshot on Test/Acceptance and Production snapshots.
- Unexpected error is displayed without details when trying to start a deployment while one is still inprogress.
- Download button could be shown if not needed/available.

3.3.1775

Changes

- Added download button to new icon controls.

Bugfixes

- Unable to synchronize Primary Context filter with connector.
- Unable to upload a json file for an install uploaded file action.

3.3.1768

Bugfixes

- Unable to use urls with a double quote within personal packages
- AutoLaunch is not enabled in embed mode.
- Background is not visible in agent when the launcher is in minimal mode.

Recast

3.3.1758

Changes

- Short login delay when authentication fails.
- Added support for url parameter sidemenu.

Bugfixes

- Context menu within the workspace isn't updated when switching languages.
- Unable to add filter settings to contexts with the PowerShell module.
- Local user display name can't be changed.
- Unable to assign entitlements in some situations.

3.3.1750

Bugfixes

- Login with NTLM SSO and Authenticator enabled could cause user accounts to be locked without reason.
- Unable to modify Identity Source Authenticator mapping after adding.
- Launcher can not always probably load its last window state.
- User is unable to add custom icons.
- /api/server/status returning incorrect results for Load Balancers.

3.3.1744

Certificates

- Assign certificates to zones within Liquit Workspace for use within the Web Server (SNI support)
- Certificates can be organized with tags
- Certificate chains are now viewable

Scheduled Tasks

- Mail notifications have been enhanced using HTML templated messages with more detailed information.
- Scheduled tasks now have an option to only send notifications when there is something to report.
- Refresh Zone Licenses now sends expiration report for zones that will expire within 14 days to the configured mail addresses.

Contexts

- Portal Settings on contexts can now override global settings.
- User Settings on contexts can now override global settings.

Connectors

- Setup Store connector now has an extra option to send detailed reports about an update that has been downloaded within Liquit Workspace.
- Okta connector has been added.
Requires the Liquit Workspace Access Manager license
- Microsoft Windows Virtual Desktop (WVD) Connector has been added.
This feature is available as a preview feature.
