

Manually Update Application Workspace Server

Last Modified on 2026-06-25

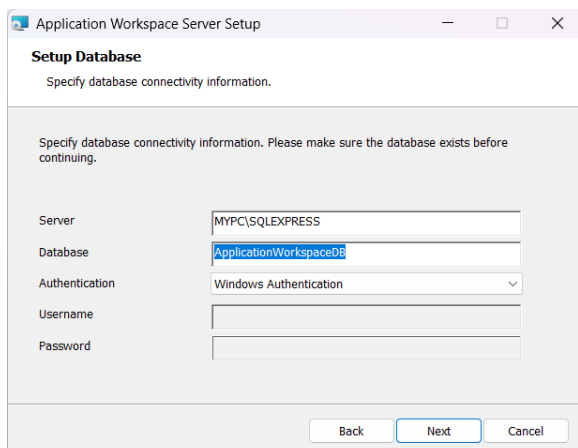

To manually update the Application Workspace Server:

1. Run the Application Workspace Server Setup Wizard, clicking **Next** in the Intro, End-User License Agreement, and Custom Setup windows.
2. In the **Service Account** window, provide the logon account for the Application Workspace Server Service. This account will be used for database connectivity when 'Use Windows Authentication' option is configured for database access and/or for securing access to the Content Store.

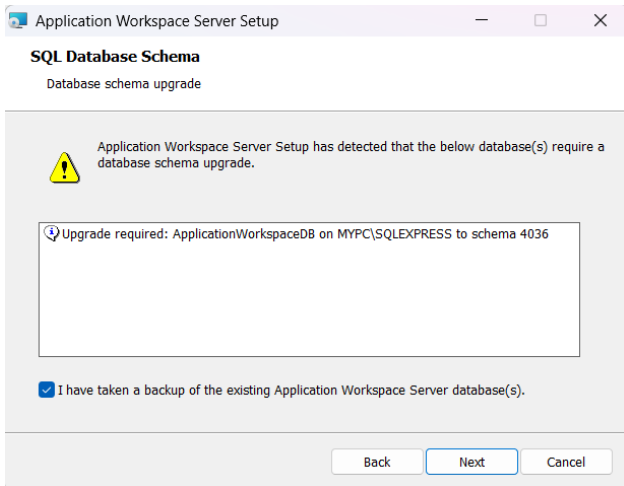

The screenshot shows the 'Service Account' window of the 'Application Workspace Server Setup' wizard. The window title is 'Application Workspace Server Setup' and the subtitle is 'Service Account'. Below the subtitle, it says 'Enter service account details'. The main instruction is 'Specify the logon account for the Application Workspace Server service.' There are two checked checkboxes: 'Use system account' and 'Start the Application Workspace Server service after installation'. Under 'Use system account', there are input fields for 'Username' (containing 'LocalSystem') and 'Password'. At the bottom, there are three buttons: 'Back', 'Next', and 'Cancel'.

3. In the **Setup Database** window, enter the database connectivity information which will be used by the Application Workspace Server Service service.

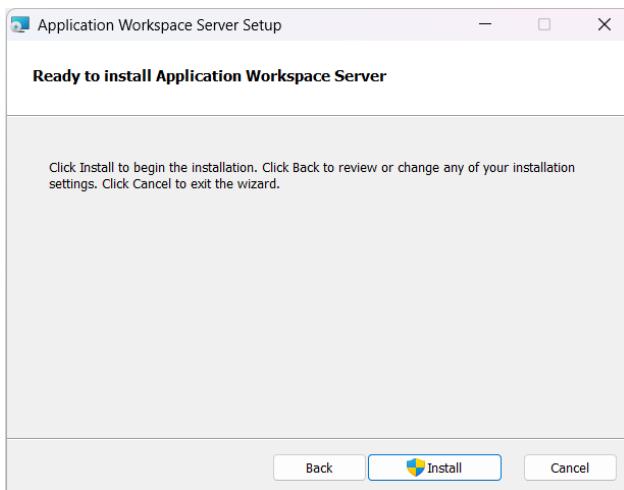

The screenshot shows the 'Setup Database' window of the 'Application Workspace Server Setup' wizard. The window title is 'Application Workspace Server Setup' and the subtitle is 'Setup Database'. Below the subtitle, it says 'Specify database connectivity information.' The main instruction is 'Specify database connectivity information. Please make sure the database exists before continuing.' There are input fields for 'Server' (containing 'MYPC\SQLEXPRESS'), 'Database' (containing 'ApplicationWorkspaceDB'), 'Authentication' (a dropdown menu showing 'Windows Authentication'), 'Username', and 'Password'. At the bottom, there are three buttons: 'Back', 'Next', and 'Cancel'.

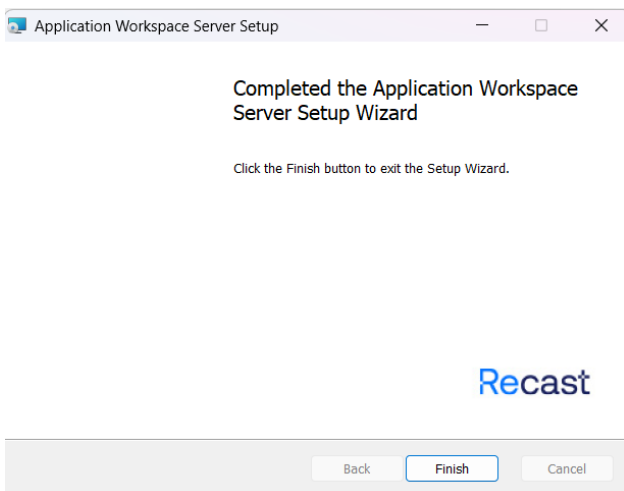

4. In the SQL Database Schema window, enable **I have taken a backup of the existing Application Workspace Server database(s)**.

5. In the Ready to install Application Workspace Server window, click **Install**.

6. After the installation is successfully completes, click **Finish** to exit the Setup Wizard.
