

Install Application Workspace Satellite Server

Last Modified on 04.16.26

The Application Workspace Satellite Server is distributed as a Microsoft Installer (MSI) which you can find on our [Downloads](#) page.

This article provides the description of a few steps required to install it.

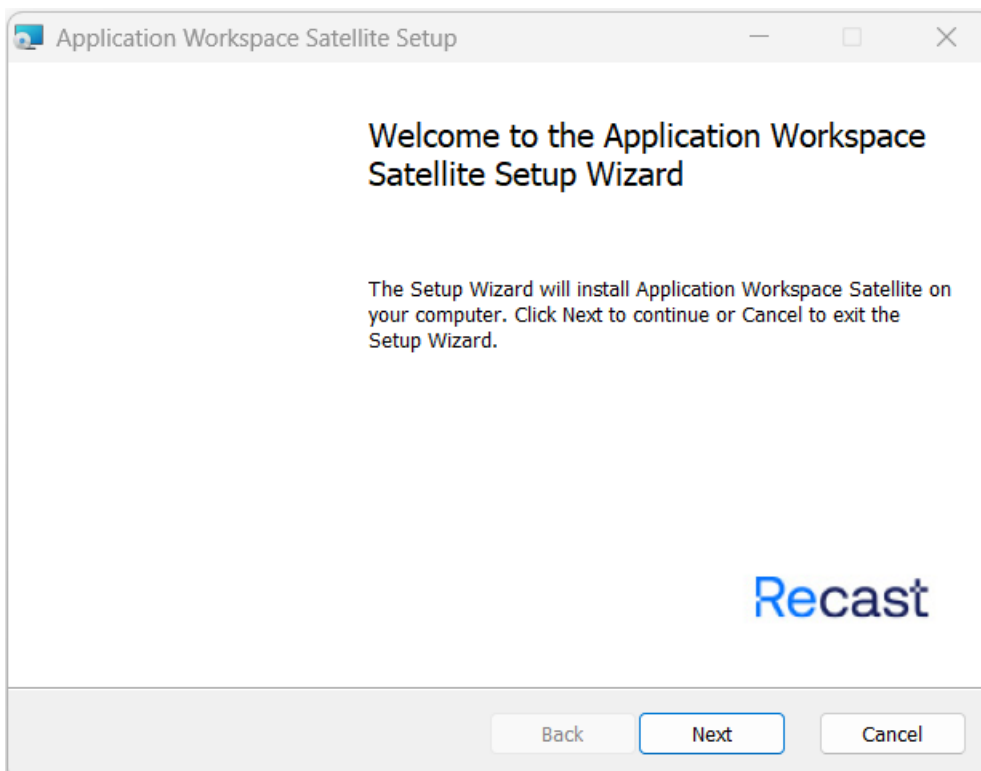

Prerequisites

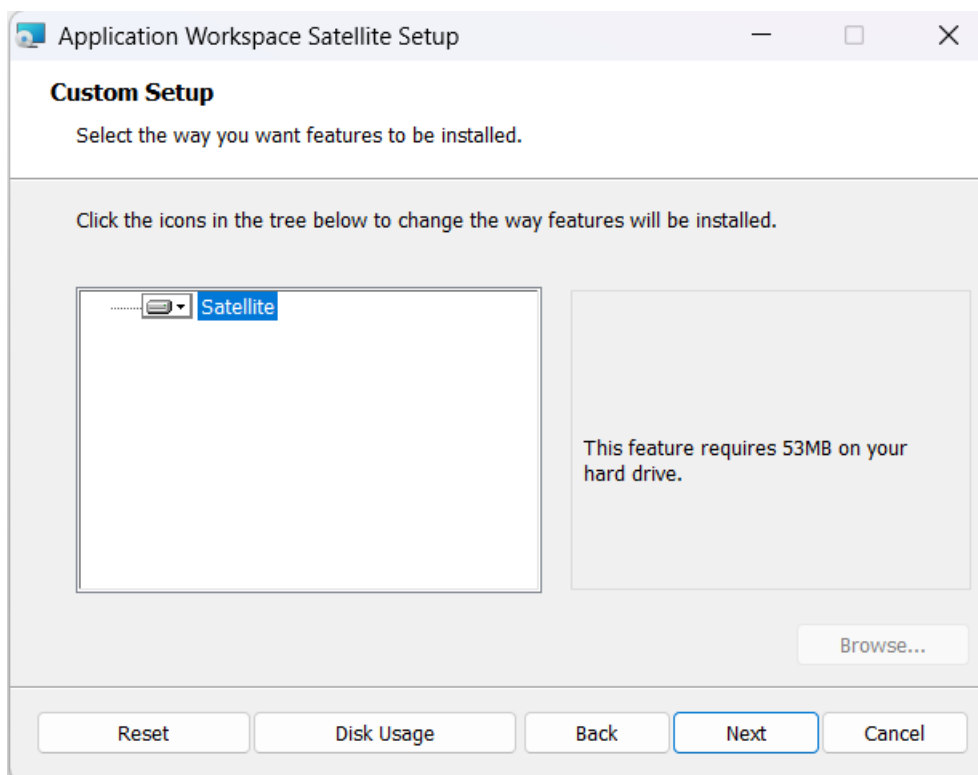

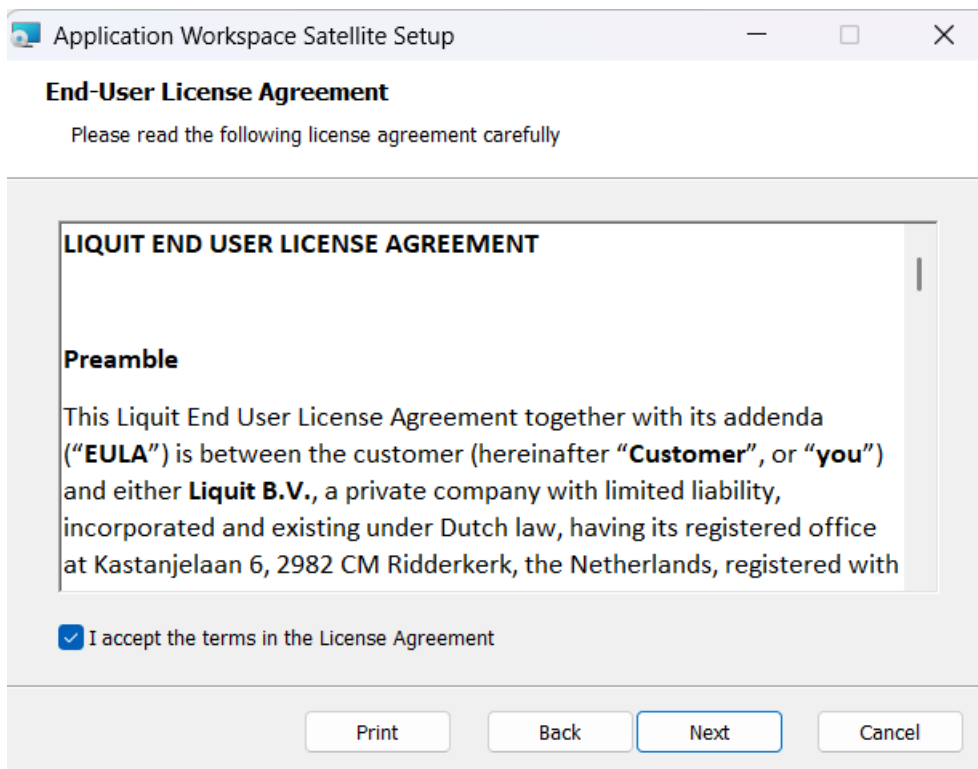

Note that Application Workspace Satellite Server is a web server and any existing services running on port 80 or 443 will cause conflicts.

To guarantee that the web version and Application Workspace Launcher of the Application Workspace work properly, a certificate supplied by Recast must be installed on the local PC. See [HTTPS \(Webserver certificates\)](#) for more information.

How to install Application Workspace Satellite Server

1. When you run the wizard, click **Next** in the first three windows.

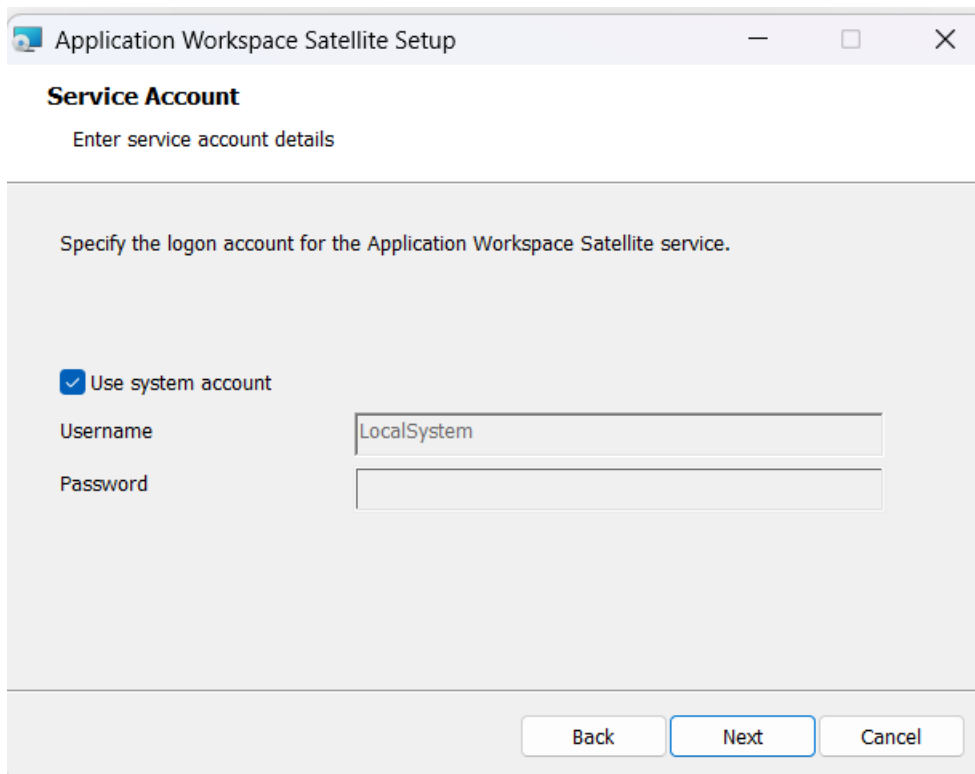

2. In the **Service Account** window, provide the credentials for the Application Workspace Satellite Server Service, which will be used for database connectivity and/or for securing access to the Content Store.

You can choose to use Windows Authentication or insert your credentials.

If you provide custom logon account credentials, make sure that this account has the "Log on as a service" rights, as described in the [Microsoft documentation](#).

Application Workspace Satellite Setup

Service Account

Enter service account details

Specify the logon account for the Application Workspace Satellite service.

Use system account

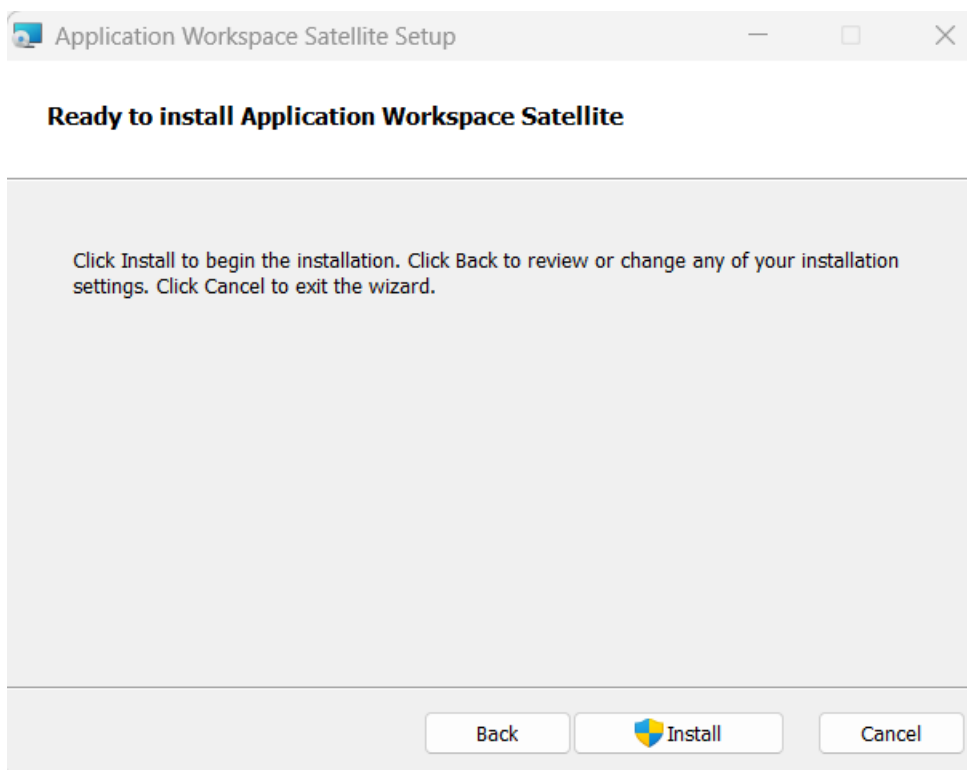

Username

Password

Back Next Cancel

3. Click Next.

4. In the Ready to install Application Workspace Satellite Server window click Install.

Application Workspace Satellite Setup

Ready to install Application Workspace Satellite

Click Install to begin the installation. Click Back to review or change any of your installation settings. Click Cancel to exit the wizard.

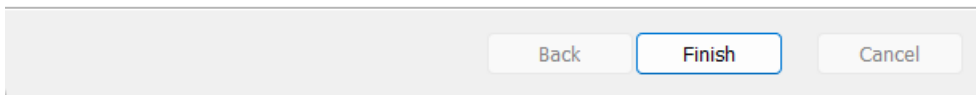

Back  Install Cancel

5. After the installation is successfully completed, click Finish.

Completed the Application Workspace Satellite Setup Wizard

Click the Finish button to exit the Setup Wizard.

Now that the Application Workspace Satellite Server is installed, you can access it using a web browser on `http://localhost/`

For more information about how to access the Application Workspace Satellite Server for the first time and how to start using it, see [Configure](#).
