Installation

Last Modified on 2026-09-24

> Liquit Workspace Agent 3.x moves to extended support
> Application Workspace 4.2 is the latest version where the Liquit Workspace Agent (XML-based) is supported. The bootstrapper is still able to download the (XML-based) Liquit Workspace Agent in Application Workspace 4.2 but this is the last version.

(Liquit Workspace Agent is available as an executable setup that contains all the supported MSI installations in one setup for easy distribution. You can find it on our Downloads page.

MSI installation properties

A few settings can be specified through MSI installation properties. For example to install the Agent for a primary zone:

```
msiexec /i Liquit-Workspace-Agent.msi WORKSPACE_URL=https://workspace.liquit.com
```

The following MSI installation properties are supported (all property names should be in upper case):

Name	Description
WORKSPACE_URL	The URL of the primary zone. Leave empty for using the current configuration.
LAUNCHER	Modify the state of both Application Workspace Launcher and login in the `Agent.xml`: • 0 Disable both Application Workspace Launcher and user login. • 1 Enable only the Application Workspace Launcher. • 2 Disable Application Workspace Launcher but do allow user login. Leave empty for using the current configuration.
AUTOSTART_USERHOST	Control whether the UserHost process needs to be started after the installation is completed. • 0 Do not start `UserHost.exe`. • 1 Automatically start `UserHost.exe` for all sessions.
OVERRIDE_CONFIG	Specify the behaviour of overriding the `Agent.xml` configuration file during installation. This option is ignored when an `Agent.xml` file is located in the same directory as the installer. • 0 Do not override • 1 Override The default value is 0. This option is ignored when an `Agent.xml` file is located in the same directory as the installer.
