

## Logging

Last Modified on 04.16.26

### Log file location

The logs of the Application Workspace Server are located in the `C:\ProgramData\Liquit Workspace\Server\Logs` folder.

### Enabling debug logging

In case of troubleshooting, you need to enable the debug logging feature by modifying the `Server.json` configuration file. This config file is located in the `C:\Program Files (x86)\Liquit Workspace\Server` folder.

Within the `Server.json` configuration file, change the `level` key of the `log` object from "Info" to "Debug":

```
"log":{  
  "level": "Debug"  
}
```

Restart the Application Workspace service to activate the debug logging.

After restart, check the `Server.log` file to verify if the log level is set to debug.
