Antivirus Recommendations for AW Satellite

Last Modified on 2026-10-05

The following paths (including their subfolders) should be excluded from file scanning and on-access scanning:

`%ProgramFiles(x86)%\Liquit Workspace\Satellite\`
`%ProgramData%\Liquit Workspace\Satellite\`

Our recommendation arises from the following consideration: this component's actions are characteristic of legitimate and malicious software. Consequently, antivirus software may misinterpret these legitimate operations as potential threats, leading to unnecessary alarms and performance degradation.
