Antivirus Exclusions for AW Agent

Last Modified on 2026-11-16

On a device that runs the Application Workspace Agent, we recommend excluding the following paths (including their subfolders) from file scanning and on-access scanning:

Windows

`%ProgramFiles%\Liquit Universal Agent\`
`%ProgramData%\Liquit\Agent\`

macOS

`/Applications/Liquit.app`
`/Library/Application Support/com.liquit.Agent/`
`/Library/Caches/com.liquit.Agent/`

Our recommendation arises from the following consideration: this component's actions are characteristic of legitimate and malicious software. Consequently, antivirus software may misinterpret these legitimate operations as potential threats, leading to unnecessary alarms and performance degradation.
