

Anti-Virus recommendations

Last Modified on 04.16.26

On a device that runs the Liquit Workspace Agent, the following paths (including their subfolders) should be excluded from file scanning and on-access scanning:

```
%ProgramFiles(x86)%\Liquit Workspace\Agent\
```

```
%ProgramData%\Liquit Workspace\Agent\
```

Our recommendation arises from the following consideration: this component's actions are characteristic of legitimate and malicious software. Consequently, antivirus software may misinterpret these legitimate operations as potential threats, leading to unnecessary alarms and performance degradation.
