

Liquit Workspace Agent Logging

Last Modified on 2026-06-15

Log file locations

Agent logs are located at `%ALLUSERSPROFILE%\Liquit Workspace\Agent\Logs` .

UserHost logs are located at `%LOCALAPPDATA%\Liquit\` .

Debug logging

To better assist you, we ask that you enable debug logging by modifying the Agent.xml configuration.

This config file is located at `C:\Program Files (x86)\Liquit Workspace\Agent` .

Within the agent.xml, modify the Log level entries to "Debug", these are by default set to "Info".

When there are no level entries within the Agent.xml, replace the following section:

```
<Log Id="agent" />
<Log Id="userhost" />
```

With the text below to enable debug logging:

```
<Log Id="agent">
  <Level>Debug</Level>
</Log>
<Log Id="userhost">
  <Level>Debug</Level>
</Log>
```

A restart of the device is required to activate debug logging.
