

Subnet

Last Modified on 04.16.26

The *Subnet* is quite a powerful filter, as it allows you to specify which reported IP address is taken into account.

General

Type *Subnet*

Description A relevant description for the filter.

Network The IP address. IPv4 is supported.

Additional networks The additional IP address. IPv6 is supported.

Subnet Subnet mask

- *Forwarded*

Looks at the forwarded IP address (in case of a proxy) that has been set in the X-Forwarded-For header.

- *Direct*

Looks at the IP address that is actually communicating with the Liquit backend. This could be a proxy.

- *Agent*

This always takes the agent IP address.

- *Remote client*

Looks at the IP address of the remote client in case of remote desktop session.

Source

Matches Yes, No

Agent

It is available on devices with or without an Agent running.

Supported platforms

Platform Supported
