Recast

Application Categories

Last Modified on 2026-10-28

Categories help you organize the packages you deploy to users.
For a category to appear on the user's device, you must first assign the packages within the category to that specific user.
Then, based on the way you set up a package, the category will appear on the **Workspace** tab, the **Catalog** tab, or both.

View categories to which an application belongs

To view the categories that include an application:

1. Go to **Manage** > **Workspace** > **Packages**.

2. Open the application to check and go to **Catalog** > **Categories**.

Create a category

See How to create a category and assign packages to it

View category details

Overview

The **Overview** tab displays the same information as in the **Create category** window you used when you created the category, as well as the **Description** field which allows you to write a relevant summary of the category.

Entities

View a list of all packages and certificates currently assigned, assign new or remove existing ones.
To view the details of an entity or edit it, double click its entry.
To add an entity, simply start typing in the lookup field for the desired entity and select it from the results lists.

For more information see Packages and Certificates.

Auditing

View a comprehensive log of changes to this category, displaying the identity behind each modification.
This screen is available only if the auditing is enabled in the Database Event Collector.

For more information, see Auditing.
