

Categories

Last Modified on 04.16.26

Categories help you establish a more granular organization of the packages you deploy to users.

In order for a category to be displayed on the user's device, you must first assign the packages within the category to that user. Moreover, based on the way you set up a package, the category is displayed in **Workspace** tab, **Catalog** tab or both.

To view which categories does an app belong to, go to **Manage > Workspace > Packages** > open the app you need and go to **Catalog > Categories**.

Categories list

This list displays all categories currently available in the Application Workspace System.

Selecting multiple rows from the table

- To select multiple adjacent rows, click on the first row, then hold down the Shift key and click on the last row in the range; all rows between will be selected.
- To select multiple non-adjacent rows, hold down the Ctrl key (or "Command" on Mac) and click on each row you want to select individually.
- To select multiple adjacent rows using the mouse only, click and hold the left mouse button on the first row, then drag the cursor up or down across the rows to highlight the desired ones.
- Selecting rows using only the keyboard is not possible.

Table toolbar

To create a new category, click on the  **Create** button; to view the details of a category or edit it, double-click its entry or select the category and click the  **Edit** button.

 **Views** gives you control on how the table is displayed.

The default view contains all your categories in alphabetic ascending order, and only one column **Name**.

You can create your own personalized view of the table, by filtering the categories or adding/deleting columns and clicking **Save as** in the drop-down menu of  **Views**.

Detailed view of a category

See below the description of each screen in the detailed view of a category, and what actions you can perform in each of them.

Overview screen

Displays the same information as in the **Create category** dialog box you used when you created the category, as well as the **Description** field which allows you to write a relevant summary of the category.

Entities screen

View a list of all packages and certificates currently assigned, assign new or remove existing ones.

To view the details of an entity or edit it, double click its entry.

To add an entity, simply start typing in the lookup field for the desired entity and select it from the results lists.

For more information see [Packages](#) and [Certificates](#).

Recast

Auditing screen

View a comprehensive log of changes to this category, displaying the identity behind each modification. This screen is available only if the auditing is enabled in the Database Event Collector. For more information, see [Auditing](#).
